“The Problem of Rising Non-performing Assets in Banking Sector in India: Comparative Analysis of Public and Private Sector Banks”

Dr. Jagadish Biradar  
Assistant Professor  
Department of MBA  
Veerappa Nisty Engineering College Shorapur

Abstract: Non-performing Asset is a vital factor in the examination of financial performance of a bank. Non Performing Asset is the key term for the banking corporations. Non Performing Assets show the competence of the performance of the banks. Non Performing Assets means which amount is not received by the bank in return of loans disbursed. Non Performing Assets affect not only the finance institution but the total financial system. The growth of the economy depends upon the efficiency and stability of the banking sector. The most important factor which measures the health of the banking industry is the size of NPAs. Non-Performing assets have direct impact on the financial performance of banks i.e. their profitability. It denotes the efficiency with which a bank is optimizing its total resources and therefore, serving an index to the degree of asset utilization and managerial effectiveness.

NPAs affects the profitability of the banks in terms of rising cost of capital, increasing gisk perception There by affecting liquidity position of banks. This paper attempts to first examine the level of NPAs in the banking sector in India and then analyze the causes for increasing NPAs. In the final part of the paper measures which bank scan taketoreduce their NPAs have been suggested. The study also compares the performance of the public sector banks with the private sector banks. The secondary data collected from different sources has been used in the study. The study shows that the magnitude of NPAs is increasing in public sector banks as compared to the private sector banks. Therefore banks need to effectively control their NPA in order to increase their profitability and efficiency.

Keywords: Banks, Non-Performing Assets, Public Sector Banks

I. Introduction

The banking system is the heart of the financial system. The major function of the financial system is them obilisation of the public savings and its allocation in different sectors of the economy as an investment. The conversion of financial savings in to investment is known as the process of capital formation in the economy. How this process of financial intermediation (i.e. collecting scattered savings and using it in to productive purposive) is carried out shall reflect the efficiency of the financial institutions and their role in socio-economic transformation of the nation. The Narasimham Committee (1991) on “Financial System Reforms” introduced the concept of non-performing assets. The statuses on non-performing assets constitute the best indicator of judging the health of the banking industry. The problem of NPAs is linked with the lending procedure of banks as these are an inevitable burden on the banks. A bank gives out money upfront and earns income over a time on the promise of a borrower to repay. When loans are not repaid, the bank loses both its income stream, as well as its capital. Lending is always accompanied by the credit risk arising out of the borrower’s default in repaying the money. The major problem today faced by all the commercial banks is the increasing risk of non-performing assets, which poses challenge to their ultimate survival.

The NPAs have been classified under four categories:

- **Standard Assets**: A standard asset is a performing asset. Standard assets generate continuous income and repayments as and when they fall due. Such assets carry a normal risk and are not NPA’s in the real sense.
- **Sub-standard Assets**: All those assets which are considered as non-performing for a period of 12months.
- **Doubtful Assets**: Those assets which are considered as non-performing for period of more than 12months.
- **Loss Assets**: All those assets which cannot be recovered. These assets are identified by the Central Bank or by the auditors.

As compared to private sector banks, public sector banks have shown a better performance as far as financial operations are concerned. The biggest problem however, in case of public sector banks is the increasing level of non-performing assets year after year. NPAs hurts the profitability of the banks as it results in non-recovery of loan installments along with the interest amount due to which banks have to use more owned
funds by way of increased capital and also in the form of reserves and surplus to provide a cushion for the loss due to loan. The efficiency of the banks is also reflected by the level of return on its assets which is deteriorated by the presence of NPAs in the balance sheet of the banks. Therefore, this paper examines the issue of NPAs in the context of scheduled commercial banks in both public and private sector. One of the drivers of growth and financial stability is the level of NPAs in the banking sector.

In the year 1992, the Government of India introduced a number of reforms to deal with the problem of growing NPAs in banking sector. The major steps includes; introduction of Debt Recovery Tribunals, Securitization Act 2002, LokAdalats, Compromise Settlement Scheme and introduction of Credit Information Bureau. The below data shows the amount of NPAs recovered through various channels during the year 2015-16.

<table>
<thead>
<tr>
<th>Recovery Channels</th>
<th>LokAdalats</th>
<th>DRT's</th>
<th>SARFAESI Act</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>No. of referred cases</td>
<td>4456634</td>
<td>24537</td>
<td>173582</td>
<td>4654753</td>
</tr>
<tr>
<td>Amount involved (in Rs. billion)</td>
<td>720</td>
<td>693</td>
<td>801</td>
<td>2214</td>
</tr>
<tr>
<td>Amount recovered (in Rs. billion)</td>
<td>32</td>
<td>64</td>
<td>132</td>
<td>228</td>
</tr>
</tbody>
</table>

In the year 2015-16, 10.3 percent of the total amount referred to for recovery is recovered through all the recovery channels. The above table shows that recovery through LokAdalats is 4.4% while it was 9.2% through DRT’s as compared to 16.5% from SARFAESI Act. Undoubtedly, strong banking sector is important for a flourishing economy. Various studies have been conducted in the past to address the issue of NPA’s in the Indian banking industry. A brief review of the different studies is given below:

Bhavani Prasad, G. and Veena, V.D (2011) in their paper titled “NPAs in Indian banking sector: trends and issues,” found that public sector banks accounted for 78 percent of NPAs and is the main reason for their falling revenues.

Kamini Rai (2012), in her study on “Performance of NPAs in Indian Commercial Banks” has examined the main reasons for increasing NPA’s in banks in India. She pointed out that the target-oriented approach, which results in ineffective supervision of loan accounts, lack of managerial and technical expertise on part of the borrowers which ultimately deteriorates the qualitative aspect of lending by banks, are the main reasons for the increasing NPAs in banks.

Mario Castelino (2005) in “Managing Non-Performing Assets” stated that in the recent past the NPAs of the corporate sector have come down drastically, where as there is a concern over increase in NPAs in the retail sector and increasing issue of frauds in mortgage loans.

Murali and Krishna (2006) observed that there has been a spurt in the lending activity of banks, in the recent past. This is due to two factors, viz. availability of huge surplus funds with the banks and the losses suffered by the banks in investment and treasury activities.

Kumar (2006) in his research book titled, “Banking Sector Efficiency in Globalized Economy,” highlighted that the performance of the banks both in the public and private sectors has become more market driven with growing emphasis on better performance.

RESEARCHMETHOD

The study is primarily analytical and descriptive based on secondary data collected from RBI publications, journals, reports and websites of public and private sector banks in India. The time period covered for the study is from 2005 to 2016. To analyses the growth in NPAs among public sector banks and private sector banks, different statistical tools like figures, bar graphs have been used. Compound annual growth rate (CAGR) has been calculated to identify the percentage increase in NPAs over the selected period under study.

I. THE SPECIFIC OBJECTIVES OF THE PRESENT STUDY ARE:

1. To find out the quantum of NPAs in public sector and private sector banks in India.
2. To analyze the impact of NPAs on banks’ performance.
3. To analyze the reasons for mounting NPAs in banks in India.
4. To suggest ways to reduce the level of NPAs in banks in India.
II. Results And Analysis

The figure 1 shows the Gross NPAs to Gross Advances Ratio of public and private sector banks during the year 2005–2016.

![Graph showing Gross NPAs to Gross Advances Ratio of public and private sector banks]

**Figure 1: Gross NPAs to Gross Advances Ratio of Public and Private Sector Banks**
(Source: Database on Indian Economy, Reserve Bank of India, 2005-2016)

The above graph shows the trend of Gross NPAs to Gross Advances Ratio of public and private sector banks for the period of 10 years starting from 2005 to 2016. The x-axis represents the years, whereas y-axis represents the ratio. We can observe here that the Gross NPAs to Gross Advances Ratio of public sector banks is showing a downward trend from year 2005 till 2008 but since the year 2009 it has started increasing. One of the reasons is the global financial turmoil of 2008. Private sector banks have also shown almost the same trend but we can see that the trend is considerably increasing for public sector banks.

II. Table 2: Gross NPAs to Gross Advances Ratio of Public and Private Sector Banks (Amount in Rs. Crores)

<table>
<thead>
<tr>
<th>Year</th>
<th>Public Sector Banks</th>
<th>Private Banks</th>
</tr>
</thead>
<tbody>
<tr>
<td>2005</td>
<td>5.36</td>
<td>3.83</td>
</tr>
<tr>
<td>2006</td>
<td>3.81</td>
<td>2.41</td>
</tr>
<tr>
<td>2007</td>
<td>2.69</td>
<td>2.19</td>
</tr>
<tr>
<td>2008</td>
<td>2.06</td>
<td>2.47</td>
</tr>
<tr>
<td>2009</td>
<td>1.75</td>
<td>2.92</td>
</tr>
<tr>
<td>2010</td>
<td>2.03</td>
<td>2.99</td>
</tr>
<tr>
<td>2011</td>
<td>1.97</td>
<td>2.48</td>
</tr>
<tr>
<td>2012</td>
<td>2.67</td>
<td>2.09</td>
</tr>
<tr>
<td>2013</td>
<td>3.24</td>
<td>1.77</td>
</tr>
<tr>
<td>2014</td>
<td>4.09</td>
<td>1.78</td>
</tr>
<tr>
<td>2015</td>
<td>5.26</td>
<td>2.10</td>
</tr>
<tr>
<td>2016</td>
<td>10.69</td>
<td>2.83</td>
</tr>
</tbody>
</table>

From Table 2, it can be seen that there is a compound annual increase of 6 percent in gross NPAs to gross advances ratio of public sector banks but with respect to private sector banks, there is a negative increase of 3 percent which means that the ratio of gross NPAs to gross advances have improved considerably over the years.

The following figure represents the movement of Net NPAs of public and private sector banks for the time period understudy.

**Table 3: Rising NPAs in Public and Private Sector Banks in India (Amount in Rs. Crores)**

IMPACT OF NPAS ON BANKS

NPAs directly affect the profitability of the banks. Below mentioned are the ways through which banks profitability is affected:

**Liquidity position:** NPAs affects the liquidity position of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**Undermine bank's image:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Cost of non-performing loans:** Non-performing loans increase the cost of funds for the banks as they have to bear the interest cost of non-performing loans.

**Increased provisioning:** NPAs increase the provisioning requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.

**Increased capital requirements:** NPAs increase the capital requirements of the banks which results in higher capital and capital ratios.

**Rise in non-performing assets:** NPAs affect the profitability of the banks, thereby creating a mis-match between assets and liability and force the banks to raise resources at high cost.

**High level of NPAs:** High level of NPAs shadows the image of banks both in domestic and global markets causing a loss in confidence of customers and investors.
markets. This ultimately leads to lower profitability.

**Effect on funding:** Increasing level of NPAs in banks results in scarcity of funds in the Indian capital market as there will be only few banking institutions who will lend money.

**Higher cost of capital:** It shall result in increasing the cost of capital as banks will now have to keep aside more funds for the smooth working of its operations.

**High risk:** NPAs will affect the risk-bearing capacity of the banks.

**Effect on income:** NPAs will reduce the net interest income of the banks as interest is not charged to these accounts.

**Declining productivity:** It will also cost in terms of time, money and manpower which will ultimately results in declining profitability, since the staff is primarily engaged with preparing papers for filing law cases to recover principal amount and interest rather than devoting time for planning mobilization of funds.

**Effect on ROI and profitability:** It reduces the earning capacity of the assets thereby negatively affect the ROI. All NPAs need to be prudentially provided for which shall have a direct impact on the profitability of the banks.

**Ultimate burden on society:** It will ultimately affect the consumers who now will have to fetch out more money for paying higher interest.

**Suggestions to reduce NPAs in banks**

- Revision of existing credit appraisal and monitoring systems by RBI
- Regular follow-up of customers by the banks to ensure that there is no diversion of funds.
- Review of all loan accounts at fixed interval.
- Proper training to bank employees and staff to overcome the weakness of credit appraisal and credit monitoring.
- Banks may resort to one-time settlement scheme or compromise settlement scheme. Recovery through Debt Recovery Tribunals and LokAdalats are other ways. Banks these days are resorting to SARFAESI Act for the management of NPAs.

**III. Conclusion**

Non-performing assets have always been a problem for the Indian banking sector as it is having a direct impact on the profitability of the banks. The failure of the banking sector may have an adverse impact on other sectors. Thus, there is a need to ensure that the banks take proper steps to resolve it, thereby ensuring fair and efficient recovery of loans so that banking sector continue to function without stress. The study reveals that the extent of NPAs is comparatively more in public sector banks as compared to private sector banks. The government is taking many steps to reduce the problem of NPAs but banks should also have to be more proactive to adopt a structured NPAs policy to prevent the non-performing assets and should follow stringent measures for its recovery. Bankers should also consider the ROI on a proposed project and provide loans to customers who have better credit worthiness as prevention is always better than cure.
