**Keywords**: COVID-19, Corona virus, Iyya Irumal, SARS-CoV-2, Siddha medicine, Traditional Medicine

**Abstract**: Corona viruses have been causing problems to the humanity for a long time. Corona Virus Infectious Disease 2019 (COVID-19), caused by the severe acute respiratory syndrome corona virus 2 (SARS-CoV-2) has developed into a pandemic since it was first identified in Wuhan, China. In this regard, a plenty of research works in traditional medicines are conducted around the world in the search for potential treatments for COVID-19. Siddha system of medicine is one of the Indian traditional medicines have wide potential for usage in such conditions owing to their longstanding use in the community (predominantly in South India), ancient references and clinical efficacy. The majority of people who contract Covid-19 suffer only mild respiratory symptoms like cough, cold, difficulty in breathing, etc. So, it is important to elaborate the disease Iyya Irumal (Irimal – one of the respiratory diseases in Siddha) mentioned in the Siddha literature to get a better insight and valid explanation. This article briefly postulates how far Siddha medicines work in COVID-19 is critically analysed with Iyya Irumal with its etio-pathogenesis, prevention and management aspects including the validation of the Siddha literature.

**References**

1. Siddhars classified all types of respiratory syndromes under Irumal, Iraippu and Ilaippu. One among them Iyya Irumal is explained under classification of Irumal Noi [9] which is closely resembles to the SARS COV-2.

I. Introduction

In 2002-2003, more than 8000 patients suffered from Severe Acute Respiratory Syndrome (SARS) due to a coronavirus, with 774 deaths and on September 2012, 2494 patients suffered with Middle East Respiratory Syndrome Coronavirus (MERS-CoV), with 858 deaths reported to WHO [1,2]. The current 2019-nCoV outbreak has moving rapidly [3]-- the cumulative number of confirmed cases all around the world 1,614,951 confirmed cases , 99,887 confirmed deaths and 213 Countries were affected and in India has reached 7367 , with 715 cured cases and 273 deaths as on 12th April 2020 [4]. On the basis of levels of spread and severity the Director-General of WHO characterized the COVID-19 situation as a pandemic, on March 11, 2020 [5]. Iyya Irumal mentioned in the Siddha literatures is identical to Sars-CoV-2 in all aspects.

Siddha medicine is one of the oldest systems of medicine developed by Siddhars. [6] Siddhars through their extraordinary perception and vision have understood the science of disease mechanism and management, etc. They have explained those experiences in Tamil, in the form of poems or verses in various literatures. In Siddha system of medicine Siddhar Agasthiyar identified 4448 diseases. [7] Any derangement in three humors (Vatham, Pitham, Kabam) results in development of 4448 diseases.

Siddha medicine has a long history and also played an indispensable role in the prevention and treatment of several epidemic diseases. During the Dengue outbreak in 2013, the intervention of Siddha has achieved a remarkable therapeutic effect [8]. However, Siddha medicine will play a significant role in the treatment of COVID-19, bringing new hope for the prevention and control of COVID-19 with its probable treatment modalities.

II. Analogy between COVID-19 and Iyya Irumal

Siddhar Yugi classified all types of respiratory syndromes under Irumal, Iraippu and Ilaippu. One among them Iyya Irumal is explained under classification of Irumal Noi [9] which is closely resembles to the SARS COV-2.
Siddha text describes the symptoms of Iyya Irumal as running nose, sore throat, chest pain when breathing or coughing, Coughing up sputum or thick phlegm from the lungs, shortness of breath, abdominal discomfort, fever, impairments of brain like altered mental status, fatigue, nausea or vomiting and bone or joint pain [10]. These symptoms described by the above mentioned text correlates with the definition of SARS-CoV-2 by WHO.

III. Naadi- The Siddha diagnostic tool for Irumal diseases

Irumal disease is mainly due to aggravation of Kabam and Vatham along with Pitham which are evident from the following:

Table 1: The Siddha diagnostic tool (Naadi) for Irumal diseases [11]

<table>

</tr>
</tbody>
</table>

The above verses explain that the derangement of Iyyam or Kabam humour is the basic reason to cause Irumal noi. Also association of Kabam with Vatham and Pitham may lead to the severity of this disease. In this Irumal diseases, one of the constituents of Vatham namely Uthana vaayu (Responsible for all kinds of upward motion such as nausea, vomiting, etc.) was increases from its normal state along with the deranged Kabam humour.

Secretion of lubricating material, cold and fatigue are some of the properties of Iyyam humour. When the Iyyam humour is vitiated, mucosa of the respiratory passage is affected and it causes the inflammation of the throat, nose, lungs, etc. Slowly the inflammation is increased and produces a lot of mucosal secretion which leads to difficulty in breathing and cough.

IV. Analysis of Aetiology Explained in Ancient Siddha Literatures with Modern Researches

In COVID-19

The causative factors of Irumal diseases are explained by Siddharm Yugi [9]

<td>A study found that SARS-CoV-2 can be present in the semen of patients with COVID-19 and may still be detected in the semen of recovering patients. For this, it could be proved that SARS-CoV-2 can be transmitted sexually</td>
<td></td>
</tr>
<tr>
<td>Excessive smoking</td>
<td>In the text Para Rasasekaram, the following are described</td>
</tr>
<tr>
<td>The smokers were 1.4 times more likely to have severe symptoms of COVID-19 and approximately 2.4 times more likely to be admitted to an ICU, need mechanical ventilation or die compared to non-smokers.</td>
<td></td>
</tr>
</tbody>
</table>

These are the conclusions of cause of the disease is very clear with presenting causes in the research up to date regarding COVID-19.

### V. Stages of COVID - 19 symptoms - Symptomatic comparison with Siddha

The most detailed breakdown of symptoms of the disease comes from a recent World Health Organization analysis of more than 55,000 confirmed cases in China. Here are the most common symptoms and the percentage of people who had them: [25]

- Fever: 88%
- Dry cough: 68%
- Fatigue: 38%
- Coughing up sputum, or thick phlegm, from the lungs: 33%
- Shortness of breath: 19%
- Bone or joint pain: 15%
- Sore throat: 14%
- Headache: 14%
- Chills: 11%
- Nausea or vomiting: 5%
- Stuffy nose: 5%
- Diarrhoea: 4%
- Coughing up blood: 1%
- Swollen eyes: 1%

**COVID-19 from China showed that illness severity can range from mild to critical** [26]

1. Mild to moderate (mild symptoms up to mild pneumonia)
2. Severe (dyspnoea, hypoxia, or >50% lung involvement on imaging)
3. Critical (respiratory failure, shock, or multi-organ system dysfunction)
In Siddha literature Yugi vaithiya chindhamani poem says,

<td>- Patients exhibit altered mental status (Thiyakkam, innoi theeramo theravathoo vennum manakalikkam piruthibhal, siththamae , igo kalangi pothal) [10] Thiyakkam-giddiness , confusion of mind, swoon [73]</td>
<td>- Patients with severe infection were more likely to develop neurologic manifestations, especially acute cerebrovascular disease, conscious disturbance, and skeletal muscle injury. [34]</td>
</tr>
<tr>
<td></td>
<td>- Body ache (Udal nuzhuvathum valithal) [10]</td>
<td>This injury could be associated with ACE2 in skeletal muscle. Their clinical conditions may worsen, and patients may die sooner. Neurologic injury has been confirmed in the infection of other CoVs such as in SARS-CoV and MERS-CoV. The researchers detected SARS-CoV nucleic acid in the cerebrospinal fluid of those patients and also in their brain tissue on autopsy. [34]</td>
</tr>
</tbody>
</table>

VI. Pathogenesis of COVID-19-Iyya Irumal
The main pathogenesis of COVID-19 infection as a respiratory system targeting virus was severe pneumonia combined with the incidence of acute cardiac injury. Significantly high blood levels of cytokines and chemokines were noted [35]
II. VII. Line of Treatment Advocated as Per The Siddha Principles with Scientific Validation [10]

Every Siddha drug is administered with a unique line of treatment. This is done to pacify the deranged humour. Initially a purgative, therapeutic vomiting or a combination of both may be used to normalize the deranged Kabam and Vatham. The significance of giving such a therapy before administering the main drug is to remove excess of phlegm from the respiratory tract.

For this any one of the following medicines can be used:

- Sanjeevi maathirai
- Korosanai karuppu- Korosanai (Purified bile of Bos indicus)

In traditional practise it is used for respiratory diseases cold, fever and cough. [36] As with other respiratory viruses, SARS-COV-2 may enter the CNS through the haematogenous or retrograde neuronal route turns out to be a brain-invader. [37] For this medicine, we use to treat an infection have different penetrations into the central nervous system. Most drugs can’t pass through the blood-brain barrier.

- Uththamani thylam (Mauntha thylam)

Uththamani (Pergularia daemia Linn.)- Anti-viral activity (Anti-corna virus/ mouse corona virus (MCV, the surrogate for human SARS virus) [38]

For the purpose of Siddha interventions during COVID-19 pandemic, people can be segregated into these five distinct categories.

Table 4: Management of Iyya Irumal with the respective of its stages

<table>
<thead>
<tr>
<th>Stages of the disease</th>
<th>Management in Siddha [10]</th>
<th>Scientific validation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stage -0 [Exposed asymptomatic (Quarantined) ]</td>
<td>To prevent the progression of pathogenesis initially, Kabasura kudineer is one of the drug of choice. Since this preparation is recently promoted as a prophylaxis for COVID-19 in South India.</td>
<td>These ingredients are proposed for the reason that these are known to be Anti-inflammatory, antivirals, Antitussive, Antioxidant, Immunomodulatory activity, Anti-pyretic effect, Hepato-protective activity, Antimalarial activity.[39]</td>
</tr>
<tr>
<td>Mild to moderate illness</td>
<td>Thumbai poo (flower of Leucas aspera (Willd.) Linn.) - 1 varagan (4.2 g) Milagu (Piper nigrum Linn.) – ½ varagan (2.1 g) Preparation: Grind both the drugs along with honey and make it into four parts—each one part for morning and evening. Repeat this until symptoms disappear. Fumigation- Grind the leaves of Leucas aspera and make it in the form of juice which is spread over a piece of cloth. The cloth is rolled into a stick and it</td>
<td>Thumbai –Anti-viral activity (Anti-corona virus, Anti-HSV) – Antimicrobial activity [40] -Flowers are valued as stimulant, cytotoxic activity, expectorant and anti-oxidant [41] -Thrombolytic activity [42] Milagu (Piper nigrum Linn.) -Immunomodulatory activity[43] -Anti-inflammatory [43] - bio-availability enhancer [43]</td>
</tr>
</tbody>
</table>
Persistent cough

- is allowed to burn. The smoke coming from this stick is made to be inhaled by the patient through the nose and exhaled by the mouth. If the smoke is inhaled through mouth and exhaled through the nose it will cause head related diseases. The spumon is properly expelled and no congestion is felt.

Kasthuri karppu-1 kundri(130 mg) and Pavazha parpam – 1 kundri (130 mg) along with kandangathiri lehyam

Kasthuri (Moschus moschiferus musk)

- Natural musk may inhibit the microbes via preventing the synthesis of nucleic acids causing construction of abnormal proteins. [44]

Severe pneumonia

- Coughing up sputum or thick phlegm, from the lungs

Thaalaga parpam – 1 kuntri (130 mg) and Maththa parpam – 1 kuntri (130 mg) along with thumbai chaaru and honey twice in a day

Thaalagam- Arsenic trioxide is now becoming a very promising chemotherapeutic agent in western medicine to treat Acute Pro-myelocytic Leukaemia (APL) and possibly other malignancies [45]. Whether it may quell the excessive immune response Covid-19 triggers in some patients and can block the inflammatory response.

End stage

- Acute Respiratory Distress Syndrome (ARDS), Sepsis, Septic Shock

Sembu parpam- 1 arisi (65 mg) and Panugai(Viverra civetta)-1 kuntri (130 mg) twice a day along with athilamani chaaru (Pergalaria daemia Linn.)

Sembu(Copper)

- wide-spectrum antiviral activity. Copper ions inactivate HIV-1 protease, which is an essential protein for viral replication.[46]

These Siddha drugs which were prescribed in clinical practice, proved their excellence in therapeutic field for the above symptoms.

Table 5: Drugs which were mentioned below for their therapeutic use in Siddha literature [10]

</tbody>
</table>

In addition to the above drugs, formulations of metals and minerals such as gold, silver, copper, iron, zinc, mercury are apparently used in the treatment. Minerals are combined with herbs that assist the assimilation and delivery of the ingredients to the human body. Most of the medicines are mixture of compounds because of their synergistic action toxicity gets reduced/eliminated, thereby increasing bioavailability through the cells of the body. Treating the minerals with herbal juices may lead to reduction in particulate size even up to Nano levels (less than 100 nm) that enables increase its potency. [47]

- Vasantha kusumagaram

  - Maga vasantha kusumagaram- A herbo-mineral drug which contains gold, iron, copper etc.
  - Gold/copper sulphide (Au/CuS) core can rapidly inactivate human norovirus [48]
  - Significance of Iron oxide nanoparticles as the potent influenza virus inhibitor [49]

- Poorana chandhirothayam – It is a mercurial preparation with gold and sulphur.

  - Gold nanoparticles have shown that they inhibit the viral entry by binding with gp120 and prevent CD4 attachment. [50]
  - Sulphur-containing purine nucleoside analogues: 6MP, 6-thiogosine, 6-methylthioinosine and 6-ethylthioinosine, were examined for antiviral activity and they extensively inhibited the replication of influenza viruses. [51]

  - Thaalaga parpam
  - Pavazha parpam – Calcium [52]
  - Palagarai parpam – Calcium carbonate, Magnesium, Phosphorus [53]
  - Chippi parpam -The crystals of calcium carbonate, Phosphate and Sulphate of Calcium and Magnesium present in the shell [54]

The main ingredients of above Parpams contain, Pavalam- Corallium rubrum Linn.- red coral, Palagarai- Cypraea moneta Linn.shell, Chippi- Pictanda fucata (Pearl oyster shell as they occur in the coastal areas of the sea. As per the above analysis it is concluded that most of marine based Parpams contain

DOI: 10.9790/0853-1906061730 www.iosrjournal.org 22 | Page
Magnesium, Calcium. Magnesium regulates anti-viral immunity. [55] Mn2+ is released from organelles and accumulates in the cytosol upon virus infection, activates anti-viral innate immunity via the cGAS-STING pathway and increases the sensitivity of cGAS to dsDNA and promotes STING activation—[56]

- Nathai parpam - Physico-Chemical Analysis of Nathai Parpam shows presence of Zine. [57] Zinc ions provide a natural protective mechanism against viruses - especially those causing respiratory tract infections.[58] Zinc ions and zinc-ionophores have inhibitory effect on the RNA synthesizing activity of isolated EAV and SARS-CoV.[59]

VIII. External medicines (Pura marundhugal) in the treatment for Iyya Irumal(COVID-19)

External medicines (Pura marundhugal) - for maintaining healthy balance of the three Uyir thaathukkal (three vital life factors) and also seven physical constituents (tissues) of the body (Udarkattukal)

IX. Cleaning and Disinfection as Per Siddha Scientific View

Instead of using chemical sources and the harmful UV rays for disinfection in living areas, hospitals and laboratories, various Siddha disinfectant methods having defined quality and prepared from easily accessible and affordable sources can be used. Some of these Chemical disinfection procedures explained below utilise derivatives of mercury, alkalis, acids and other products, which are already written in our ancient Siddha literatures.

Fumigation

Fumigation has been used since ancient times to 'purify the air', also useful for disinfecting objects, clothing, etc. During the epidemic of cattle plague, anthrax fumigation was recommended to control these diseases in 17th and 18th century. [68]

Traditional fumigation with these herbal products is widely used in India. They have the potential to be used as alternative to harmful and toxic conventional chemical fumigation for healthcare environmental disinfection. This involves the artificial impregnation by purification of the environment and sterilizing action on the local or inner areas in the form of medicated smoke.

Environmental disinfection efficiency of traditional fumigation practice has been evaluated by using natural plant products such as Pepper (Piper nigrum), Turmeric (Curcuma longa) powder, Sandal wood (Santalum album), Seeragam (Cuminum cyminum), Neem (Azadirachta indica) and Sambirani (resin of Styrax benzoin) and Kungiliyam (Shorea robusta). Fumigation controls the infection up to the deeper areas of the organs. [62]

Disinfection by drying

This method often involved the combined action of heat and ultra-violet radiation obtained by exposure to sunlight. [68]

Kaanthi sutigai (Sun bath)

Kaanthi is defined as an application of adequate exposure of our body to sunlight (Sun bath) - whole body except head to induce perspiration. Sutigai means “heat application”. Thus the low amount of heat is received from the sunlight to the body surface. Siddhar Theraiyar states that the evening rays of sun is more beneficial than the morning raise and used to treat some illnesses and to improve the health status. [69] The sunlight provides Vitamin D and its use is recognized to act as a major immuno-modulator and its production have consequences for the control of viral infections [70]

Herbal face mask

Grind the turmeric (Curcuma longa Linn.) and mix it with water and soak a white cloth in this turmeric water. Then dry it. If we wear this medicated cloth as a face mask, it cures cough, fever and toxic fever. [71]

By using disinfectants which are detailed in ancient Siddha literature, we minimize the usage of chemicals or other harmful disinfectants to cleanse the environment.

X. Preventive Measures Against Infectious Diseases Mentioned In Siddha

Literature

In Siddha system of medicine, it’s mentioned that during the onset of Utrayana kalam from the months of Thai to Aadi i.e from February to July, the immunity of human body tends to fluctuate. Siddhars have explained the importance of Diet, Lifestyle and certain season-specific regimen and also preventive measures to be taken to prevent epidemics and their spread. By this we can understand that people living in ancient times were also affected by epidemics and followed the guidelines effectively prescribed to them. [72]
XI. Justification for Kaba Sura Kudineer Used In The Treatment of Covid-19--- In Siddha System of Medicine

According to the text Agathiyar Sura Nool 300, it is stated by the Siddhar Agathiyar that [10]

- **“Suramathey kabama thaagum”**: Because of the Kaba Suram, the blood flow to the lungs becomes less and it will raise the body temperature and affect the function of the lungs. The expectorant action is affected and it causes loss of body weight and increases the action of Iyyam.

- **“Suramathey Iruma laagum”**: If the Iyyam parts of the body (i.e. Above the Neck) become warm at the time of curing stage of the Iyya Suram, it will cause Irumal (Cough).

- **“Suramathey vaatha maagum”**: In Iyya Suram, the drug of choice will be to normalise the deranged Iyyam humour and simultaneously to increase the Vatham humour. Because of the increased Vatham humour, the digestive system gets affected and produces Vatha symptoms like difficulty in defecation and difficulty in micturition.

- **“Suramathey eelai yaagum”**: The functions of Vatha component include producing pathinaangu vegangal (14 natural urges/reflexes) in our body. In this disease, Swaasam (respiration) which is one of the 14 natural urges get affected. So, one of the excretory functions of the lung (expectorant) in the form of sputum/mucous secretions get affected leading to difficulty in breathing.

- **“Suramathey Izhuppu maagum”**: In Iyya Suram, the Vatham humour gets decreased by affecting the main function of the Vatham in the lungs i.e. Swaasam. Because of the decreased Vatham humor, the excretory function of the lung will deranged and simultaneously the Kabam humor gets increased within the lungs that lead to Izhappu.

DOI: 10.9790/0853-1906061730 www.iosrjournal.org 25 | Page
The above lines of the poem ultimately conclude that the Iyya Irumal symptoms will be caused if the Iyya Suram is not treated properly at its earlier stages. So that, Kaba Sura Kudineer which is one of the drugs of choice mainly for Iyya Suram is recommended for prophylactic as well as therapeutic management of COVID-19.

XII. Strengthening of Innate Immune System through Pranayamam (Breathing Exercise)

Siddha treatment consists of not only medicines, but also unique therapies such as Kaya karpam including Yogam (Rejuvenation/Anti-oxidant therapy). Siddhar Yogam stresses the importance of breathing exercise Pranayamam which is highly recommended for strengthening the respiratory system. Pranayamam could acutely produce salivary biomolecules with key biological functions immediately after practice. There is a significant increase in the acute expression of molecules cellular processes, immune response, and those molecules were found mainly in the extracellular space and several molecules belong to the Ig super family. Pranayamam induces these molecules to promote immune response as a first line of defense in the mucosa. Four tumor suppressors are significantly stimulated after pranayamam and one among them was deleted in malignant brain tumor 1 (DMBT1). DMBT1 mediates innate immune response by binding to the bacterial and viral antigens. Binding of soluble DMBT1 is known to reduce the infectivity of HIV1 as well as influenza A viruses (i.e. Type A influenza). DMBT1 is also shown to activate the complement pathway, further supporting its role in innate immune system [74]

XIII. Discussion

Unfortunately, so far we don’t have anything that can stop people getting Covid-19 pneumonia. People are already trialling all sorts of medications and we’re hopeful Siddha medicine could be effective. At the moment there isn’t any established treatment apart from supportive treatment, that is what we give people in intensive care. We ventilate them and maintain high oxygen levels until their lungs are able to function in a normal way again as they recover. In some situations, that isn’t enough for the current outbreak. The pneumonia went unabated and the patients did not survive conditions. As per the very recent report following the post-mortem examination of the deceased due to COVID-19, it is observed that pneumonia is not the main culprit but the disseminated intra-vascular coagulation and severe inflammatory processes account for the fast and large scale destruction of lung tissues and death. However as there is no defined treatment for Corona Virus is available at present, the claim of allopathic doctors is that the herbal remedies suggested by various Indian Medical practitioners are not clinically proven or do not have any clinical evidence warrants change in their view. There is no harm in taking these herbs as preventive medicine because they are known for ages as excellent Immune Modulator and used extensively for various Immuno suppressive ailments. As per Siddhar Thiruvalluvar,

“Noi naadi noi mutha naadi yathu thanikkum Vaainadi vaippa cheyal” - Thirukkural 948
“Utraan alavum piniyalavum kaalamum katraan karudhich cheyal”. Thirukkural 949

The above couplet explains, it is essential to know the diagnosis and cause for the disease, before treating the patient. The nature of patient, the degree of illness, and the season and time of the occurrences of the disease must be noted. This above principle should be kept in mind before treating the patient.

Siddha system has a unique diagnostic method to identify the diseases and their causes The diagnosis is made by observing the five sense organs: Nose, Tongue, Eyes, Ear and the skin; the five senses: Smell, Taste, Vision, Touch and hearing are by interrogation. The primary importance should be given to physical examination of the five sense organs of the patient using those of the physician. According to the Siddhar Theraiyar, there are eight tools of diagnosis: Examination of Naadi (pulse), skin (Sparisam-palpation), tongue, complexion, voice, eyes, stools and urine(colour, smell, density, quantity and oil drop spreading pattern i.e. “Meikuri Niram Thoni Vizhi Nea IriMalam kaikkuri” –Theraiyar. The examination of the Naadi and urine have a great significance in diagnosis. [11]

According to Siddha philosophy, the human body consists three functional units and seven structural units they are collectively known as Muththathukkal – (three vital life factors namely, Vatham, Pitham and Kabam) and seven Udatkaddikka(physical or somatic components) respectively. Each of the three Dosham (Mukkutrungal) are classified into sub types and each type is responsible for the special functions of the body. Main cause of Iru mal noigal is said to be life style, environmental condition, seasonal variations and food habits which cause derangement of Iyyam humor along with Vatham and Pitham. The causative factor should be noted and removed. In Iyya irumal the vitiated Kabam along with Vatham, Pitham must be brought to normal condition. For this, initially a purgative, emetic, or a combination of both may be used to normalize the deranged Kabam and Vatham. The significance of giving such a therapy before
administering the main drug is to remove excess of phlegm from the respiratory tract. Many prepared medicines used for this are Sanjeevi maathirai, Korosanai, Uththamani thylam.

As per the administration of emetics and purgative, the vitiated dosham get normalized and main course of the drug shall be started. For this, the following principle is to be adopted. That is “Ver paru thazhai para minjinal Mella mella parpa chenduram paaru”. Common herbs which are used in respiratory diseases possess anti-viral activity, anti-inflammatory, anti-oxidant and immune modulator activities. For example, the following single herbs as per Ganapadam Porutpanbu Nool, Vishnukiranthi (Evolvulus alsinooides Linn), Sirukurinjaan (Gynnema sylvestre (Retz) R.Br., Isangu (Clerodendrum inerme Linn.) have proved that they possess Anti-viral activity[Anti-coronavirus][75] and Karkkadagasingi (Rhus succedanea Linn.) [76] Inhibits the polymerase of HIV-1 reverse transcriptase [77] which is directly indicated for Irumal noigal in Siddha literatures.

Anti viral activity-which might be associated with blocking of the proliferation and replication of the viral particles, and that they might be able to improve lung damage. Notable host pathways shown to interact with SARS-CoV-2 during its replication include antiviral pathways in the innate immune response such as the stress granule protein G3BP1, a known antiviral protein that induces the innate immune antiviral response [78]

Anti-inflammatory action - particular importance in the treatment of severe cases of COVID-19, when the host inflammatory response becomes a major cause of lung damage. Anti-inflammatories are likely to be effective against the consequences of the elevated levels of cytokines (including interferon-γ) typically observed in people with COVID-19 [79] Anti-oxidant activity -cytokine storm mainly affects the lungs; leading to acute lung injury. Modulation of cytokine production using antioxidant may modulate the host immune response and ameliorate the cytokine storm associated with viral diseases such as COVID-19. [80]

Immune modulator action- Patients with serious or critical clinical symptoms show marked T cell lymphopenia. Functional exhaustion of T cells is suggested by high expression of T-cell exhaustion markers ameliorated production of multiple inflammatory cytokines, reversed the loss of T lymphocytes as well as functional T cell exhaustion and reduced the leukocyte infiltration of multiple organs. [81]

At first herbal remedies must be tried. If there is no relief, the powerful inorganic preparations such as Parpams, Chendoorams and Karuppu must be given. They are Kasthuri karuppu, Pavazhha parpam, Thadaga parpam, Maththu parpam, Sembu parpam, Pooranachandrothhayam, Palagurai parpam, Nathai parpam and Chippu parpam. Most of the parpams and chendurams indicated for respiratory illnesses possess gold, iron, zinc, magnesium etc. Parpam and chenduram are minerals treated with herbal juices and may lead to reduction in particulate size even down to nanoparticle levels. Nanomaterials offer unique physico-chemical properties that have linked benefits for drug delivery as ideal tools for viral treatment. Tiny iron oxide nanoparticles when coated with silica, have a strong affinity for RNA, the genetic material inside the virus that causes COVID-19, seems fight the coronavirus outbreak. [82]

External medicines (Pura marundhugal) which are used to eliminate the symptoms of running nose, cough, chest congestion, headache. Nasiyam (Nasal Instillation) - Nasiyam is a process by which the drug is administered through the nostrils. The intranasal route may allow certain drug molecules to bypass the blood brain barrier via diffusion or axonal transport along olfactory and trigeminal nerves. The numerous capillaries embedded in the nasal mucosa absorb the medicine and produce various kinds of local and systemic effects by mechanical and chemical reactions. The discharge secreted contains the blocking morbid and are evacuated through nasal route. Thus the pathological condition is reversed and the disease is relieved.

Ottradam (Fomentation) – This procedure involves the purification, local heating, analgesic and anti-inflammatory action of the topical applications and fomentation is given in the form of compression and relaxation of medicated packs. Ottradam removes wastes as toxins through the skin and balances three humours. It is also dilating all body channels for cleansing. While giving fomentation the heat is increased and gets mobilized.

Vedhu (Steam inhalation) - it involves the inhalation of water vapour. The warm, moist air is thought to work by loosening the mucus in the nasal passages, throat, and lungs. This may relieve symptoms of inflamed, swollen blood vessels in nasal passages. Pooitchu (Liquid poultice), Potitanam (Bundle application), Pugai (Medicated fumigation)

Various disinfectants used in ancient times and detailed in Siddha literatures are eco-friendly, possess minimal harm and more suitable than the chemicals which are used nowadays.

Siddhars, the spiritual scientists of Tamil Nadu explored and explained the reality of nature and its relationship to man by their yogic awareness and experimental findings. They cured innumerable diseases amazingly and designed a perfect protocol for every disease for their prevention and treatment.

Siddha medicine is a not only a medical system for curing diseases of the physical body, but also it’s a way of life formulated by Siddhars through their vision and realisation for getting healthy body and healthy mind. These endemic, epidemic, pandemic diseases do not stop here and it will continue in the coming decades.
Therefore we should keep our immune system strong as much as possible and should change our lifestyle as per the guidelines given in our Siddha system.

XIV. Conclusion

In this study, the humoral concepts of Iyya Irumal critically analysed with SARS CoV-2 and it may be a platform to create scientific evidence for integrative approach for arriving the clinical diagnosis and therapeutics. This review work on etio-pathogenesis of Iyya Irumal Noi would also pave the way for identification of more individualized methods of treatment strategies. The epistemologically sensitive research on the philosophy of Siddha on Iyya irumal may help to identify early predictors of Irumal Noigal (Respiratory infections) which may be useful for prevention. The Siddha medicines are natural, easily available and cost effective and it can be administered for a prolonged period without any adverse reactions. No assistance is required and there is no strenuous procedure involved in taking the Siddha drugs. These medicines despite their continuous usage for many centuries, for universal acceptance, it requires modern scientific studies to evaluate the safety and efficacy. If those studies are done then it will be beneficial to the society for lowering the treatment cost of respiratory diseases as well as the mortality rate.
