# Inequalities on Multivalent Harmonic Starlike Functions Involving Hypergeometric Functions 

Dr Noohi Khan (AP II)<br>Department of Amity school of applied sciences Amity University, Malhore Lucknow UP

#### Abstract

In this paper we obtain some inequalities as sufficient conditions for the harmonic multivalent $\mathrm{S}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ function $G(z)$ to be in classes . Inequalities for convolution multiplier of two harmonic multivalent functions $f$ and $G$ are also obtained. Also it shown that these inequalities are necessary and sufficient for the function $\mathrm{G}_{1}(\mathrm{z})$. Further, the necessary and sufficient conditions for the functions $\mathrm{G}_{2}(\mathrm{z})$ to be in classes $\mathrm{S}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ are obtained.

## I. Introduction

Let $\mathrm{SH}(\mathrm{m}), \mathrm{m} \geq 1$, denotes the class of all m -valent, harmonic and orientation-preserving functions in the open unit disk $\Delta=\{z:|z|<1\}$. A function f in $\mathrm{SH}(\mathrm{m}), \mathrm{m} \geq 1$ can be expressed as $\mathrm{f}=\mathrm{h}+\overline{\mathrm{g}}$, where $h$ and $g$ are analytic functions of the form

$$
\begin{equation*}
\mathrm{h}(\mathrm{z})=\mathrm{z}^{\mathrm{m}}+\sum_{\mathrm{n}=2}^{\infty} \mathrm{A}_{\mathrm{n}+\mathrm{m}-1} z^{\mathrm{n}+\mathrm{m}-1}, \mathrm{~g}(\mathrm{z})=\sum_{\mathrm{n}=1}^{\infty} \mathrm{B}_{\mathrm{n}+\mathrm{m}-1} z^{\mathrm{n}+\mathrm{m}-1},\left|\mathrm{~B}_{\mathrm{m}}\right|<1 \tag{1.1}
\end{equation*}
$$

Definition 1.1[1,2]
Let $\mathrm{S}^{*} \mathrm{H}_{\mathrm{m}}(\alpha), \mathrm{m} \geq 1$ and $\mathrm{O} \leq \alpha<1$ denotes the class of functions $\mathrm{f}=\mathrm{h}+\overline{\mathrm{g}} \in \mathrm{SH}(\mathrm{m})$ which satisfy the condition.

$$
\begin{equation*}
\frac{\partial}{\partial \theta}\left(\arg \left(\mathrm{f}\left(\mathrm{re}^{\mathrm{i} \theta}\right)\right)\right) \geq \mathrm{m} \alpha \tag{1.2}
\end{equation*}
$$

for each $z=\mathrm{re}^{\mathrm{i} \theta}, 0 \leq \theta<2 \pi$ and $0 \leq \mathrm{r}<1$. A function in $\mathrm{S}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ is called m-valent harmonic starlike function of order $\alpha$.

The class $\mathrm{S}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ was studied by Ahuja and Jahangiri [5],[6]. In particular, they stated the following Lemma.
Lemma 1.1 [5],[6]
Let $\mathrm{f}=\mathrm{h}+\overline{\mathrm{g}}_{\text {be given by (1.1) if }}$

$$
\begin{equation*}
\sum_{n=1}^{\infty}\left[\frac{n-1+m(1-\alpha)}{m(1-\alpha)}\left|A_{n+m-1}\right|+\frac{n-1+m(1+\alpha)}{m(1-\alpha)}\left|B_{n+m-1}\right|\right] \leq 2 \tag{1.3}
\end{equation*}
$$

where $A_{m}=1$ and $m \geq 1,0 \leq \alpha<1$. then the harmonic function f is sense-preserving, m -valent and $\mathrm{f} \in \mathrm{S}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$
Denote by $\mathrm{T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ is the subclasses of consisting of functions $\mathrm{f}=\mathrm{h}+\overline{\mathrm{g}}, \mathrm{f} \in \mathrm{S}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$
so that $h$ and $g$ are of the form

$$
\begin{align*}
h(z)= & z^{m}-\sum_{n=2}^{\infty} A_{n+m-1} z^{n+m-1},  \tag{1.6}\\
& g(z)=\sum_{n=1}^{\infty} B_{n+m-1} z^{n+m-1}, A_{n+m-1} \geq 0, B_{n+m-1} \geq 0, B_{m}<1
\end{align*}
$$

. Lemma 1.2 [5],[9]

Let $f=h+\bar{g}_{\text {be given by (1.6) then }} f \in \mathrm{~T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ if and only if

$$
\sum_{n=2}^{\infty}\{n-1+m(1-\alpha)\} A_{n+m-1}+\sum_{n=1}^{\infty}\{n-1+m(1+\alpha)\} B_{n+m-1} \leq m(1-\alpha)
$$

## Definition:

The Gauss hypergeometric function ${ }_{2} \mathrm{~F}_{1}(\mathrm{a}, \mathrm{b} ; \mathrm{c} ; \mathrm{z})$ for $\ldots . . .,-2,-1,0 \neq \mathrm{c}, \mathrm{a}, \mathrm{b} \in \mathrm{C}$, a set of complex numbers is defined as

$$
\begin{aligned}
& { }_{2} \mathrm{~F}_{1}(\mathrm{a}, \mathrm{~b} ; \mathrm{c} ; \mathrm{z}) \equiv \mathrm{F}(\mathrm{a}, \mathrm{~b} ; \mathrm{c} ; \mathrm{z})=\sum_{\mathrm{n}=0}^{\infty} \frac{(\mathrm{a})_{\mathrm{n}}(\mathrm{~b})_{\mathrm{n}}}{(\mathrm{c})_{\mathrm{n}}(1)_{\mathrm{n}}} z^{\mathrm{n}} . \\
& (\lambda)_{\mathrm{n}}=\frac{\sqrt{(\lambda}+\mathrm{n})}{\sqrt{(\lambda)}}=\lambda(\lambda+1) \ldots(\lambda+\mathrm{n}-1) \text { for } \mathrm{n}=1,2,3 \ldots \quad \text { and }(\lambda)_{0}=1 .
\end{aligned}
$$

$\mathrm{F}(\mathrm{a}, \mathrm{b} ; \mathrm{c} ; \mathrm{z}) \quad$ is analytic in $\Delta=\{\mathrm{z}:|\mathrm{z}|<1\}$ and for $\operatorname{Re}(\mathrm{c}-\mathrm{a}-\mathrm{b})>0$, $\mathrm{F}(\mathrm{a}, \mathrm{b} ; \mathrm{c} ; 1)=\frac{\sqrt{(\mathrm{c})(\mathrm{c}-\mathrm{a}-\mathrm{b})}}{\sqrt{(\mathrm{c}-\mathrm{a}) \mid(\mathrm{c}-\mathrm{b})}}, \mathrm{c} \neq 0,-1,-2, \ldots$.

In this paper a harmonic m-valent function $\mathrm{G}(\mathrm{z})=\phi_{1}(\mathrm{z})+\overline{\phi_{2}(z)}$ is considered, where $\phi_{1}(z)$ and $\phi_{2}(z)$ are m-valent analytic functions in $\Delta=\{z:|z|<1\}$ defined in terms of above mentioned hypergeometric function as :

$$
\begin{align*}
& \begin{aligned}
\phi_{1}(z)= & \phi_{1}\left(a_{1}, b_{1} ; c_{1} ; z\right)=z^{m} F\left(a_{1}, b_{1} ; c_{1} ; z\right) \\
= & z^{m}+\sum_{\mathrm{n}=2}^{\infty} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} z^{\mathrm{n}+\mathrm{m}-1}
\end{aligned},  \tag{1.7}\\
& \begin{aligned}
\phi_{2}(\mathrm{z})= & \phi_{2}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; z\right)=z^{\mathrm{m}-1}\left[\mathrm{~F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; z\right)-1\right] \\
& =\sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} z^{\mathrm{n}+\mathrm{m}-1}, \mathrm{a}_{2} \mathrm{~b}_{2}<\mathrm{c}_{2} .
\end{aligned}
\end{align*}
$$

Also, consider a harmonic m-valent function $\mathrm{G}_{1}(z)$ which is defined as :

$$
G_{1}(z)=z^{m}\left(2-\frac{\phi_{1}(z)}{z^{m}}\right)+\overline{\phi_{2}(z)} \quad \text { for } a_{j}, b_{j}>0, c_{j}>a_{j}+b_{j}+1, j=1,2
$$

Further, a convolution $L_{m}(f, G)$ of two harmonic $m$-valent functions $f$ and $G$ is considered as follows:
$L_{\mathrm{m}}(\mathrm{f}, \mathrm{G})(\mathrm{z})=\left(\mathrm{f}^{*} \mathrm{G}\right)(\mathrm{z})$

$$
\begin{aligned}
\quad= & \mathrm{h}(z) * \phi_{1}(z)+\overline{\mathrm{g}(z) * \phi_{2}(z)} \\
= & \mathrm{P}(z)+\overline{\mathrm{Q}(z)} \\
\mathrm{P}(\mathrm{z}) & =z^{\mathrm{m}}+\sum_{\mathrm{n}=2}^{\infty} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} \mathrm{~A}_{\mathrm{n}+\mathrm{m}-1} z^{\mathrm{n}+\mathrm{m}-1} \\
\mathrm{Q}(\mathrm{z}) & =\sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \mathrm{~B}_{\mathrm{n}+\mathrm{m}-1} z^{\mathrm{n}+\mathrm{m}-1}, \mathrm{a}_{2} \mathrm{~b}_{2}\left|\mathrm{~B}_{\mathrm{m}}\right|<\mathrm{c}_{2} .
\end{aligned}
$$

where

Ahuja and Silverman [4] have given a nice connection between Harmonic univalent functions and hypergeometric functions and obtained some inequalities harmonic univalent functions which are sensepreserving, harmonic starlike univalent (harmonic convex univalent) in $\Delta$. They also defined a convolution
multipliers between two harmonic univalent functions. Motivated by the work of Ahuja and Silverman [4] in this chapter some inequalities as sufficient conditions for m-valent harmonic function $G(z)$ to be sensepreserving starlike and convex of positive order $\alpha(0 \leq \alpha<1)$ are obtained. It is also shown that these inequalities are necessary and sufficient for the function $\mathrm{G}_{1}(z)$. Further necessary and sufficient conditions for the function $\mathrm{G}_{2}(z)$ to be in class $\mathrm{f} \in \mathrm{S}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ are obatained. Inequalities for convolution of two harmonic m -valent functions f and G are also obtained.
2: Main Results
Theorem 2.1 s
If $\mathrm{a}_{\mathrm{j}}, \mathrm{b}_{\mathrm{j}}>0, \mathrm{c}_{\mathrm{j}}>\mathrm{a}_{\mathrm{j}}+\mathrm{b}_{\mathrm{j}}+1$ for $\mathrm{j}=1,2$ then a sufficient condition for $\mathrm{G}=\phi_{1}+\overline{\phi_{2}}$ where $\phi_{1}$ and $\phi_{2}$ are given in (1.7) and (1.8) respectively to be sense-preserving harmonic m-valent in $\Delta$ and $\mathrm{G} \in \mathrm{S}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ is that

$$
\begin{aligned}
& \text { (3.2.1) } \mathrm{F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)\left(\frac{\mathrm{a}_{1} \mathrm{~b}_{1}}{\mathrm{c}_{1}-\mathrm{a}_{1}-\mathrm{b}_{1}-1}+\mathrm{m}(1-\alpha)\right)+ \\
& \mathrm{F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right)\left(\frac{\mathrm{a}_{2} \mathrm{~b}_{2}}{\mathrm{c}_{2}-\mathrm{a}_{2}-\mathrm{b}_{2}-1}+\mathrm{m}(1+\alpha)-1\right) \leq \mathrm{m}(3-\alpha)-1
\end{aligned}
$$

Proof
To prove that G is sense-preserving in $\Delta$, it only needs to show that
$\left|\phi_{1}{ }^{\prime}(z)\right|>\left|\phi_{2}{ }^{\prime}(z)\right|, z \in \Delta$
By the hypothesis, it noted that

$$
\begin{aligned}
& \left|\phi_{1}{ }^{\prime}(z)\right|=\left|m z^{m-1}+\sum_{n=2}^{\infty}(n+m-1) \frac{\left(a_{1}\right)_{n-1}\left(b_{1}\right)_{n-1}}{\left(c_{1}\right)_{n-1}(1)_{n-1}} z^{n+m-2}\right| \\
& =\left|m z^{m-1}+\sum_{n=2}^{\infty}(n-1) \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} z^{\mathrm{n}+\mathrm{m}-2}+\sum_{\mathrm{n}=2}^{\infty} \mathrm{m} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} z^{\mathrm{n}+\mathrm{m}-2}\right| \\
& >\left[m-\sum_{n=2}^{\infty}(\mathrm{n}-1) \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}}-\mathrm{m} \sum_{\mathrm{n}=2}^{\infty} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}}\right]|z|^{\mathrm{m}-1} \\
& =\left[m-\frac{a_{1} b_{1}}{c_{1}} \sum_{n=1}^{\infty} \frac{\left(a_{1}+1\right)_{n-1}\left(b_{1}+1\right)_{n-1}}{\left(c_{1}+1\right)_{n-1}(1)_{n-1}}-m \sum_{n=1}^{\infty} \frac{\left(a_{1}\right)_{n}\left(b_{1}\right)_{n}}{\left(c_{1}\right)_{n}(1)_{n}}\right]|z|^{m-1} \\
& =\left[2 \mathrm{~m}-\frac{\mathrm{a}_{1} \mathrm{~b}_{1}}{\mathrm{c}_{1}} \frac{\Gamma\left(\mathrm{c}_{1}+1\right) \Gamma\left(\mathrm{c}_{1}-\mathrm{a}_{1}-\mathrm{b}_{1}-1\right)}{\Gamma\left(\mathrm{c}_{1}-\mathrm{a}_{1}\right) \Gamma\left(\mathrm{c}_{1}-\mathrm{b}_{1}\right)}-\mathrm{m} \frac{\Gamma\left(\mathrm{c}_{1}\right) \Gamma\left(\mathrm{c}_{1}-\mathrm{a}_{1}-\mathrm{b}_{1}\right)}{\Gamma\left(\mathrm{c}_{1}-\mathrm{a}_{1}\right) \Gamma\left(\mathrm{c}_{1}-\mathrm{b}_{1}\right)}\right]|z|^{\mathrm{m}-1} \\
& =\left[2 m-\left(\frac{a_{1} b_{1}}{c_{1}-a_{1}-b_{1}-1}+m\right) F\left(a_{1}, b_{1} ; c_{1} ; 1\right)\right]|z|^{m-1} \\
& \geq\left[\left\{\frac{a_{2} b_{2}}{c_{2}-a_{2}-b_{2}-1}+m(1+\alpha)-1\right\} F\left(a_{2}, b_{2} ; c_{1} ; 1\right)-m \alpha\left(F\left(a_{1}, b_{1} ; c_{1} ; 1\right)-1\right)-m+1\right]|z|^{m-1} \\
& \geq\left[\left\{\frac{a_{2} b_{2}}{c_{2}-a_{2}-b_{2}-1}+(m-1)\right\} F\left(a_{2}, b_{2} ; c_{1} ; 1\right)-m+1\right]|z|^{m-1}, 0 \leq \alpha<1 \\
& =\left[\frac{\mathrm{a}_{2} \mathrm{~b}_{2}}{\mathrm{c}_{2}} \frac{\Gamma\left(\mathrm{c}_{2}+1\right) \Gamma\left(\mathrm{c}_{2}-\mathrm{a}_{2}-\mathrm{b}_{2}-1\right)}{\Gamma\left(\mathrm{c}_{2}-\mathrm{a}_{2}\right) \Gamma\left(\mathrm{c}_{2}-\mathrm{b}_{2}\right)}+(\mathrm{m}-1) \frac{\Gamma\left(\mathrm{c}_{2}\right) \Gamma\left(\mathrm{c}_{2}-\mathrm{a}_{2}-\mathrm{b}_{2}\right)}{\Gamma\left(\mathrm{c}_{2}-\mathrm{a}_{2}\right) \Gamma\left(\mathrm{c}_{2}-\mathrm{b}_{2}\right)}-\mathrm{m}+1\right]|\mathrm{z}|^{\mathrm{m}-1} \\
& =\left[\frac{\mathrm{a}_{2} \mathrm{~b}_{2}}{\mathrm{c}_{2}} \sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}+1\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{2}+1\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{2}+1\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}}+(\mathrm{m}-1) \sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}}\right]|z|^{\mathrm{m}-1}
\end{aligned}
$$

$$
\begin{aligned}
& =\sum_{\mathrm{n}=1}^{\infty}(\mathrm{n}+\mathrm{m}-1) \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}}|z|^{\mathrm{m}-1} \\
& \geq \sum_{\mathrm{n}=1}^{\infty}(\mathrm{n}+\mathrm{m}-1) \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}}|z|^{\mathrm{n}+\mathrm{m}-2} \\
& \geq\left|\sum_{\mathrm{n}=1}^{\infty}(\mathrm{n}+\mathrm{m}-1) \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} z^{\mathrm{n}+\mathrm{m}-2}\right|=\left|\phi_{2}^{\prime}(\mathrm{z})\right|
\end{aligned}
$$

so, G is sense-preserving in $\Delta$.
To, show that $G$ is m-valent and $G \in S^{*} H_{m}(\alpha)$, on applying Lemma 1.1 it only needs to show that

$$
\begin{align*}
\sum_{\mathrm{n}=2}^{\infty}[\mathrm{n}-1+ & m(1-\alpha)] \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}}+  \tag{2.2}\\
& +\sum_{\mathrm{n}=1}^{\infty}[\mathrm{n}-1+m(1+\alpha)] \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \leq m(1-\alpha)
\end{align*}
$$

The left hand side of (2.2) is equivalent to

$$
\begin{aligned}
& \sum_{\mathrm{n}=2}^{\infty}(\mathrm{n}-1) \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}}+\mathrm{m}(1-\alpha) \sum_{\mathrm{n}=2}^{\infty} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}}+\sum_{\mathrm{n}=1}^{\infty} \frac{\mathrm{n}\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \\
& \quad+\{\mathrm{m}(1+\alpha)-1\} \sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \\
& =\frac{\mathrm{a}_{1} \mathrm{~b}_{1}}{\mathrm{c}_{1}-\mathrm{a}_{1}-\mathrm{b}_{1}-1} \mathrm{~F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)+\mathrm{m}(1-\alpha)\left[\mathrm{F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)-1\right]+ \\
& \quad \frac{\mathrm{a}_{2} \mathrm{~b}_{2}}{\mathrm{c}_{2}-\mathrm{a}_{2}-\mathrm{b}_{2}-1} \mathrm{~F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right)+\{\mathrm{m}(1+\alpha)-1\}\left[\mathrm{F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right)-1\right] \\
& = \\
& =\mathrm{F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)\left(\frac{\mathrm{a}_{1} \mathrm{~b}_{1}}{\mathrm{c}_{1}-\mathrm{a}_{1}-\mathrm{b}_{1}-1}+\mathrm{m}(1-\alpha)\right)+ \\
& \quad \mathrm{F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right)\left(\frac{\mathrm{a}_{2} \mathrm{~b}_{2}}{\mathrm{c}_{2}-\mathrm{a}_{2}-\mathrm{b}_{2}-1}+\mathrm{m}(1+\alpha)-1\right)-\mathrm{m}(1-\alpha)-\mathrm{m}(1+\alpha)+1
\end{aligned}
$$

The last expression is bounded by $\mathrm{m}(1-\alpha)$ provided that (2.1) is satisfied. Therefore, $G \in S^{*} H_{m}(\alpha)$. Consequently $G$ is sense-preserving and $m$-valent of order $\alpha$ in $\Delta$.

For $m=1$ and $\alpha=0$ the following corollary [4] is obtained.
Corollary 2.2 [4]
If $a_{j}, b_{j}>0, c_{j}>a_{j}+b_{j}+1$ for $j=1,2$, then a sufficient condition for $G=\phi_{1}+\overline{\phi_{2}}$ with m=1 to be harmonic univalent in $\Delta$ and $\mathrm{G} \in \mathrm{S}^{*} \mathrm{H}$ is that
$\left(1+\frac{a_{1} b_{1}}{c_{1}-a_{1}-b_{1}-1}\right) F\left(a_{1}, b_{1} ; c_{1} ; 1\right)+\frac{a_{2} b_{2}}{c_{2}-a_{2}-b_{2}-1} F\left(a_{2}, b_{2} ; c_{2} ; 1\right) \leq 2$.
Theorem 2.5
Let $\mathrm{a}_{\mathrm{j}}, \mathrm{b}_{\mathrm{j}}>0, \mathrm{c}_{\mathrm{j}}>\mathrm{a}_{\mathrm{j}}+\mathrm{b}_{\mathrm{j}}+1_{\text {for } \mathrm{j}=1,2 \text { and }} \mathrm{a}_{2} \mathrm{~b}_{2}<\mathrm{c}_{2}$, if

$$
\begin{align*}
& \mathrm{G}_{1}(\mathrm{z})=\mathrm{z}^{\mathrm{m}}\left(2-\frac{\phi_{1}(\mathrm{z})}{\mathrm{z}^{\mathrm{m}}}\right)+\overline{\phi_{2}(\mathrm{z})}  \tag{2.5}\\
& \mathrm{G}_{1} \in \mathrm{~T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha) \text { then, } \\
& \text { if and only if }(2.1) \text { holds. }
\end{align*}
$$

Proof

It is observed that
$\mathrm{G}_{1}(\mathrm{z})=\mathrm{z}^{\mathrm{m}}-\sum_{\mathrm{n}=2}^{\infty} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} z^{\mathrm{n}+\mathrm{m}-1}+\overline{\sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} z^{\mathrm{n}+\mathrm{m}-1}}$
and $T^{*} H_{m}(\alpha) \subset S^{*} H_{m}(\alpha)$. In view of Theorem 2.1, it only needs to show the necessary condition for $G_{1}$ to $\mathrm{T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha) .{ }_{\text {If }} \mathrm{G}_{1} \in \mathrm{~T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$
Theorem 2.6
If $\mathrm{a}_{\mathrm{j}}, \mathrm{b}_{\mathrm{j}}>0$ and $\mathrm{c}_{\mathrm{j}}>\mathrm{a}_{\mathrm{j}}+\mathrm{b}_{\mathrm{j}}$ for $\mathrm{j}=1,2$ then a sufficient condition for a function
$\mathrm{G}_{2}(\mathrm{z})=\mathrm{m} \int_{0}^{\mathrm{z}} \mathrm{t}^{\mathrm{m}-1} \mathrm{~F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; \mathrm{t}\right) \mathrm{dt}+\int_{0}^{\mathrm{z}} \mathrm{t}^{\mathrm{m}-1}\left[\mathrm{~F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; \mathrm{t}\right)-1\right] \mathrm{dt}$
to be in $\mathrm{S}^{*} \mathrm{H}^{0}(\mathrm{~m})$ is that
(3.2.6)

$$
\mathrm{mF}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)+\mathrm{F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right) \leq 2 \mathrm{~m}+1 .
$$

Proof
In view of Lemma 3.1.1, the function
$\mathrm{G}_{2}(\mathrm{z})=\mathrm{z}^{\mathrm{m}}+\sum_{\mathrm{n}=2}^{\infty} \frac{m}{\mathrm{n}+\mathrm{m}-1} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} z^{\mathrm{n}+\mathrm{m}-1}+\sum_{\mathrm{n}=2}^{\infty} \frac{1}{\mathrm{n}+\mathrm{m}-1} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} z^{\mathrm{n}+\mathrm{m}-1}$
is in $\mathrm{S}^{*} \mathrm{H}^{0}(\mathrm{~m})$ if
$\sum_{n=2}^{\infty} \frac{n+m-1}{m} \frac{m}{n+m-1} \frac{\left(a_{1}\right)_{n-1}\left(b_{1}\right)_{n-1}}{\left(c_{1}\right)_{n-1}(1)_{n-1}}+\sum_{n=2}^{\infty} \frac{n+m-1}{m} \frac{1}{n+m-1} \frac{\left(a_{2}\right)_{n-1}\left(b_{2}\right)_{n-1}}{\left(c_{2}\right)_{n-1}(1)_{n-1}} \leq 1$
That is, if

$$
\sum_{n=2}^{\infty} \frac{\left(a_{1}\right)_{n-1}\left(b_{1}\right)_{n-1}}{\left(c_{1}\right)_{n-1}(1)_{n-1}}+\frac{1}{m} \sum_{n=2}^{\infty} \frac{\left(a_{2}\right)_{n-1}\left(b_{2}\right)_{n-1}}{\left(c_{2}\right)_{n-1}(1)_{n-1}} \leq 1
$$

which holds if (2.6) is true.
Theorem 2.6

$$
\text { If } a_{1}, b_{1}>-1, c_{1}>0, a_{1} b_{1}<0, a_{2}>0, b_{2}>0 \text { and } c_{j}>a_{j}+b_{j}+1, j=1,2 \text { then }
$$

$$
\mathrm{G}_{2}(\mathrm{z})=\mathrm{m} \int_{0}^{\mathrm{z}} \mathrm{t}^{\mathrm{m}-1} \mathrm{~F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; \mathrm{t}\right) \mathrm{dt}+\int_{0}^{\mathrm{z}} \mathrm{t}^{\mathrm{m}-1}\left[\mathrm{~F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; \mathrm{t}\right)-1\right] \mathrm{dt}
$$

is in $\mathrm{S}^{*} \mathrm{H}^{0}(\mathrm{~m})$ if and only if

$$
\mathrm{mF}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)-\mathrm{F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right) \geq-1 .
$$

(2.7)

Proof
By the hypothesis using Lemma (1.3) to

$$
\begin{aligned}
\mathrm{G}_{2}(z)= & z^{\mathrm{m}}-\frac{\left|\mathrm{a}_{1} \mathrm{~b}_{1}\right|}{\mathrm{c}_{1}} \sum_{\mathrm{n}=2}^{\infty} \frac{m}{\mathrm{n}+\mathrm{m}-1} \frac{\left(\mathrm{a}_{1}+1\right)_{\mathrm{n}-2}\left(\mathrm{~b}_{1}+1\right)_{\mathrm{n}-2}}{(\mathrm{n}-1)\left(\mathrm{c}_{1}+1\right)_{\mathrm{n}-2}(1)_{\mathrm{n}-2}} z^{\mathrm{n}+\mathrm{m}-1} \\
& +\sum_{\mathrm{n}=2}^{\infty} \frac{1}{\mathrm{n}+\mathrm{m}-1} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} z^{\mathrm{n}+\mathrm{m}-1}
\end{aligned}
$$

It suffices to show that

$$
\begin{aligned}
& \frac{\left|\mathrm{a}_{1} \mathrm{~b}_{1}\right|}{\mathrm{c}_{1}} \sum_{\mathrm{n}=2}^{\infty} \frac{\mathrm{n}+\mathrm{m}-1}{m} \frac{m}{\mathrm{n}+\mathrm{m}-1} \frac{1}{(\mathrm{n}-1)} \frac{\left(\mathrm{a}_{1}+1\right)_{\mathrm{n}-2}\left(\mathrm{~b}_{1}+1\right)_{\mathrm{n}-2}}{\left(\mathrm{c}_{1}+1\right)_{\mathrm{n}-2}(1)_{\mathrm{n}-2}} \\
& +\sum_{\mathrm{n}=2}^{\infty} \frac{\mathrm{n}+\mathrm{m}-1}{\mathrm{~m}(\mathrm{n}+\mathrm{m}-1)} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} \leq 1
\end{aligned}
$$

or,
$\sum_{n=1}^{\infty} \frac{\left(a_{1}+1\right)_{n-1}\left(b_{1}+1\right)_{n-1}}{\left(c_{1}+1\right)_{n-1}(1)_{n-1} n}+\frac{c_{1}}{\left|a_{1} b_{1}\right|} \frac{1}{m} \sum_{n=1}^{\infty} \frac{\left(a_{2}\right)_{n}\left(b_{2}\right)_{n}}{\left(c_{2}\right)_{n}(1)_{n}} \leq \frac{c_{1}}{\left|a_{1} b_{1}\right|}$
But, this is equivalent to
$\frac{c_{1}}{a_{1} b_{1}} \sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}}\left(\mathrm{b}_{1}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}}(1)_{\mathrm{n}}}+\frac{\mathrm{c}_{1}}{\left|\mathrm{a}_{1} \mathrm{~b}_{1}\right|} \frac{1}{m} \sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \leq \frac{\mathrm{c}_{1}}{\left|\mathrm{a}_{1} \mathrm{~b}_{1}\right|}$
That is if (2.7) holds.
Theorem 2.7
Let $\mathrm{a}_{\mathrm{j}}, \mathrm{b}_{\mathrm{j}}>0, \mathrm{c}_{\mathrm{j}}>\mathrm{a}_{\mathrm{j}}+\mathrm{b}_{\mathrm{j}}+1$, for $\mathrm{j}=1,2$ and $\mathrm{a}_{2} \mathrm{~b}_{2}<\mathrm{c}_{2}$. A necessary and sufficient condition for $\mathrm{L}_{\mathrm{m}}(\mathrm{f}, \mathrm{G})(\mathrm{z})=\mathrm{f}{ }^{*}\left(\phi_{1}+\bar{\phi}_{2}\right) \in \mathrm{T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ and $\mathrm{G}=\phi_{1}+\bar{\phi}_{2}$ given by (1.7) and (1.8) for $\mathrm{f} \in \mathrm{T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ is that

$$
\begin{equation*}
\mathrm{F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)+\mathrm{F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right) \leq 3 . \tag{2.8}
\end{equation*}
$$

Proof
Let $\mathrm{f}=\mathrm{h}+\overline{\mathrm{g}} \in \mathrm{T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$, where h and g are given by (1.6).Also,
$L_{m}(f, G)(z)=z^{m}-\sum_{n=2}^{\infty} \frac{\left(a_{1}\right)_{n-1}\left(b_{1}\right)_{n-1}}{\left(c_{1}\right)_{n-1}(1)_{n-1}} A_{n+m-1} z^{n+m-1}+\overline{\sum_{n=1}^{\infty} \frac{\left(a_{2}\right)_{n}\left(b_{2}\right)_{n}}{\left(c_{2}\right)_{n}(1)_{n}} B_{n+m-1} z^{n+m-1}}$
In view of Lemma 1.3 it only needs to prove that $L_{m}(f, G)(z) \in T^{*} H_{m}(\alpha)$.
As an application of Lemma 1.3,

$$
A_{n+m-1} \leq \frac{m(1-\alpha)}{n-1+m(1-\alpha)}, B_{n+m-1} \leq \frac{m(1-\alpha)}{n-1+m(1+\alpha)}
$$

Consider

$$
\begin{aligned}
& \sum_{\mathrm{n}=2}^{\infty}\{\mathrm{n}-1+\mathrm{m}(1-\alpha)\} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left.\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1} 1\right)_{\mathrm{n}-1}} \mathrm{~A}_{\mathrm{n}+\mathrm{m}-1} \\
& \quad+\sum_{\mathrm{n}=1}^{\infty}\{\mathrm{n}-1+\mathrm{m}(1+\alpha)\} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \mathrm{~B}_{\mathrm{n}+\mathrm{m}-1}
\end{aligned} \quad \begin{aligned}
& \leq \mathrm{m}(1-\alpha) \sum_{\mathrm{n}=2}^{\infty} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}}+\mathrm{m}(1-\alpha) \sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \\
& =\mathrm{m}(1-\alpha) \mathrm{F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)+\mathrm{m}(1-\alpha) \mathrm{F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right)-2 \mathrm{~m}(1-\alpha) .
\end{aligned}
$$

The last expression is bounded above by $m(1-\alpha)$ if and only if (2.8) is satisfied. This proves the result.
Theorem 2.9
Let $\mathrm{a}_{\mathrm{j}}, \mathrm{b}_{\mathrm{j}}>0, \mathrm{c}_{\mathrm{j}}>\mathrm{a}_{\mathrm{j}}+\mathrm{b}_{\mathrm{j}}+1$ for $\mathrm{j}=1,2$ then (2.) is a necessary and sufficient condition for a function
$L_{m, c}(f, G)(z)=\frac{c+m}{z^{c}} \int_{0}^{z} t^{c-1} P(t) d t+\frac{c+m}{z^{c}} \int_{0}^{z} t^{c-1} Q(t) d t$
to be in
$\mathrm{T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ for $\mathrm{f} \in \mathrm{T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$ of the form (1.6) and $\mathrm{G}=\phi_{1}+\bar{\phi}_{2}$ given by (1.7) and (1.8).
Proof
By the hypothesis
$\left.L_{m, c}(f, G)(z)=z^{m}-\sum_{n=2}^{\infty} \frac{c+m}{n+m+c-1} \frac{\left(a_{1}\right)_{n-1}\left(b_{1}\right)_{n-1}}{\left(c_{1}\right)_{n-1}(1)_{n-1}} A_{n+m-1}+\sum_{n=1}^{\infty} \frac{c+m}{n+m+c-1} \frac{\left(a_{2}\right)_{n}\left(b_{2}\right)_{n}}{\left(c_{2}\right)_{n}(1)_{n}} B_{n+m-1}\right)$ and
as $\mathrm{f} \in \mathrm{T}^{*} \mathrm{H}_{\mathrm{m}}(\alpha)$,
$A_{n+m-1} \leq \frac{m(1-\alpha)}{n-1+m(1-\alpha)} \quad{ }_{\text {and }} \quad B_{n+m-1} \leq \frac{m(1-\alpha)}{n-1+m(1+\alpha)}$.

Consider,
$\sum_{n=2}^{\infty}(n-1+m(1-\alpha)) \frac{c+m}{n+m+c-1} \frac{\left(a_{1}\right)_{n-1}\left(b_{1}\right)_{n-1}}{\left(c_{1}\right)_{n-1}(1)_{n-1}} A_{n+m-1}+$

$$
\begin{aligned}
& \quad+\sum_{\mathrm{n}=1}^{\infty}(\mathrm{n}-1+\mathrm{m}(1+\alpha)) \frac{\mathrm{c}+\mathrm{m}}{\mathrm{n}+\mathrm{m}+\mathrm{c}-1} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} B_{\mathrm{n}+\mathrm{m}-1} \\
& \leq \mathrm{m}(1-\alpha) \sum_{\mathrm{n}=2}^{\infty} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}}+\mathrm{m}(1-\alpha) \sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \\
& =\mathrm{m}(1-\alpha) \mathrm{F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)+\mathrm{m}(1-\alpha) \mathrm{F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right)-2 \mathrm{~m}(1-\alpha) .
\end{aligned}
$$

The last expression is bounded above by $\mathrm{m}(1-\alpha)$ if and only if (2.8) is satisfied. This proves the result.

$$
\begin{aligned}
& \quad \sum_{\mathrm{n}=2}^{\infty} \frac{(\mathrm{n}+\mathrm{m}-1)\{\mathrm{n}-1+\mathrm{m}(1-\alpha)\}}{\mathrm{m}} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}} A_{\mathrm{n}+\mathrm{m}-1} \\
& +\sum_{\mathrm{n}=1}^{\infty} \frac{(\mathrm{n}+\mathrm{m}-1)\{\mathrm{n}-1+\mathrm{m}(1+\alpha)\}}{\mathrm{m}} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \mathrm{~B}_{\mathrm{n}+\mathrm{m}-1} \\
& \leq \mathrm{m}(1-\alpha) \sum_{\mathrm{n}=2}^{\infty} \frac{\left(\mathrm{a}_{1}\right)_{\mathrm{n}-1}\left(\mathrm{~b}_{1}\right)_{\mathrm{n}-1}}{\left(\mathrm{c}_{1}\right)_{\mathrm{n}-1}(1)_{\mathrm{n}-1}}+\mathrm{m}(1-\alpha) \sum_{\mathrm{n}=1}^{\infty} \frac{\left(\mathrm{a}_{2}\right)_{\mathrm{n}}\left(\mathrm{~b}_{2}\right)_{\mathrm{n}}}{\left(\mathrm{c}_{2}\right)_{\mathrm{n}}(1)_{\mathrm{n}}} \\
& = \\
& \mathrm{m}(1-\alpha) \mathrm{F}\left(\mathrm{a}_{1}, \mathrm{~b}_{1} ; \mathrm{c}_{1} ; 1\right)+\mathrm{m}(1-\alpha) \mathrm{F}\left(\mathrm{a}_{2}, \mathrm{~b}_{2} ; \mathrm{c}_{2} ; 1\right)-2 \mathrm{~m}(1-\alpha)
\end{aligned}
$$

The last expression is bounded above by $\mathrm{m}(1-\alpha)$ if and only if (2.11) is satisfied. This proves the result.
