Ranking Of Octagonal Intuitionistic Fuzzy Numbers

G. Menaka

Assistant Professor, Department of Mathematics, Sri Shakthi Institute of Engineering and Technology, Coimbatore, India

Abstract: In This Paper We Introduce Octagonal Intuitionistic Fuzzy Numbers With Its Membership And Non-Membership Functions. A New Method Is Proposed For Finding An Optimal Solution For Intuitionistic Fuzzy Transportation Problem, In Which The Supplies And Demands Are Octagonal Intuitionistic Fuzzy Numbers. The Procedure Is Illustrated With A Numerical Example.

Keywords: Intuitionistic Fuzzy Transportation Problems, Initial Basic Feasible Solution, Modi Method, Ranking Method, Octagonal Intuitionistic Fuzzy Numbers, Optimal Solution.

I. Introduction

The central concept in the problem is to find the least total transportation cost of commodity. In general, transportation problems are solved with assumptions that the cost, supply and demand are specified in precise manner. However in many cases the decision maker has no precise information about the coefficient belonging to the transportation problem. Intuitionistic fuzzy set is a powerful tool to deal with such vagueness.

II. Preliminaries

II.1. FUZZY SET [FS][3]:

Let X be a nonempty set. A fuzzy set \( \tilde{A} \) of X is defined as:

\[ \tilde{A} = \{ x, \mu_{\tilde{A}}(x) \mid x \in X \} \]

Where \( \mu_{\tilde{A}}(x) \) is called membership function, which maps each element of X to a value between 0 and 1.

II.2. FUZZY NUMBER [FN][3]:

A fuzzy number is a generalization of a regular real number and which does not refer to a single value but rather to a connected set of possible values, where each possible value has its weight between 0 and 1. The weight is called the membership function.

A fuzzy number \( \tilde{A} \) is a convex normalized fuzzy set on the real line R such that

- There exist at least one \( x \in \mathbb{R} \) with \( \mu_{\tilde{A}}(x) = 1 \).
- \( \mu_{\tilde{A}}(x) \) is piecewise continuous.

II.3. TRIANGULAR FUZZY NUMBER [TFN][3]:

A triangular fuzzy number \( \tilde{A} \) is denoted by 3-tuples \((a_1, a_2, a_3)\), where \( a_1 \), \( a_2 \) and \( a_3 \) are real numbers and \( a_1 \leq a_2 \leq a_3 \) with membership function defined as

\[
\mu_{\tilde{A}}(x) = \begin{cases} 
\frac{x - a_1}{a_2 - a_1} & \text{for } a_1 \leq x \leq a_2 \\
\frac{a_3 - x}{a_3 - a_2} & \text{for } a_2 \leq x \leq a_3 \\
0 & \text{otherwise}
\end{cases}
\]
II.4. TRAPEZOIDAL FUZZY NUMBER [TRFN] [3]:
A trapezoidal Fuzzy number is denoted by 4 tuples \( \tilde{A} = (a_1, a_2, a_3, a_4) \), where \( a_1, a_2, a_3 \) and \( a_4 \) are real numbers and \( a_1 \leq a_2 \leq a_3 \leq a_4 \) with membership function defined as,
\[
\mu_{\tilde{A}}(x) = \begin{cases} 
\frac{x-a_1}{a_2-a_1} & \text{for } a_1 \leq x \leq a_2 \\
1 & \text{for } a_2 \leq x \leq a_3 \\
\frac{a_4-x}{a_4-a_3} & \text{for } a_3 \leq x \leq a_4 \\
0 & \text{otherwise}
\end{cases}
\]

II.5. PENTAGON FUZZY NUMBER [PFN] [3]:
A Pentagon Fuzzy Number \( \tilde{A}_p = (a_1, a_2, a_3, a_4, a_5) \). Where \( a_1, a_2, a_3, a_4 \) and \( a_5 \) are real numbers and \( a_1 \leq a_2 \leq a_3 \leq a_4 \leq a_5 \) with membership function is given below,
\[
\mu_{\tilde{A}_p}(x) = \begin{cases} 
0 & \text{for } x < a_1 \\
\frac{x-a_1}{a_2-a_1} & \text{for } a_1 \leq x \leq a_2 \\
\frac{x-a_2}{a_3-a_2} & \text{for } a_2 \leq x \leq a_3 \\
1 & \text{for } x = a_3 \\
\frac{a_4-x}{a_4-a_3} & \text{for } a_3 \leq x \leq a_4 \\
\frac{a_5-x}{a_5-a_4} & \text{for } a_4 \leq x \leq a_5 \\
0 & \text{for } x > a_5
\end{cases}
\]

II.6. HEXAGONAL FUZZY NUMBER [HFN] [3]:
A Hexagon Fuzzy Number \( \tilde{A}_h = (a_1, a_2, a_3, a_4, a_5, a_6) \). Where \( a_1, a_2, a_3, a_4, a_5 \) and \( a_6 \) are real numbers and \( a_1 \leq a_2 \leq a_3 \leq a_4 \leq a_5 \leq a_6 \) with membership function is given below,
\[
\mu_{\tilde{A}_h}(x) = \begin{cases} 
\frac{1}{2} \left( \frac{x-a_1}{a_2-a_1} \right) & \text{for } a_1 \leq x \leq a_2 \\
\frac{1}{2} + \frac{1}{2} \left( \frac{x-a_2}{a_3-a_2} \right) & \text{for } a_2 \leq x \leq a_3 \\
1 & \text{for } a_3 \leq x \leq a_4 \\
1 - \frac{1}{2} \left( \frac{x-a_4}{a_5-a_4} \right) & \text{for } a_4 \leq x \leq a_5 \\
\frac{1}{2} \left( \frac{a_6-x}{a_6-a_5} \right) & \text{for } a_5 \leq x \leq a_6 \\
0 & \text{otherwise}
\end{cases}
\]

II.7. OCTAGONAL FUZZY NUMBER [OFN] [4]:
A Fuzzy Number \( \tilde{A}_{OFN} \) is a normal Octagonal Fuzzy Number denoted by \( \tilde{A} = (a_1, a_2, a_3, a_4, a_5, a_6, a_7, a_8) \), where \( a_1, a_2, a_3, a_4, a_5, a_6, a_7, a_8 \) are real numbers and its membership function \( \mu_{\tilde{A}}(x) \) is given below:
II.8. INTUITIONISTIC FUZZY SET [IFS] [3]:

Let X be a non-empty set. An Intuitionistic fuzzy set \( \tilde{A} \) of X is defined as, 
\( \tilde{A} = \{ <x, \mu_{\tilde{A}}(x), \nu_{\tilde{A}}(x) > / x \in X \} \). Where \( \mu_{\tilde{A}}(x) \) and \( \nu_{\tilde{A}}(x) \) are membership and non-membership function. Such that \( \mu_{\tilde{A}}(x), \nu_{\tilde{A}}(x) : X \rightarrow [0, 1] \) and \( 0 \leq \mu_{\tilde{A}}(x) + \nu_{\tilde{A}}(x) \leq 1 \) for all \( x \in X \).

II.9. INTUITIONISTIC FUZZY NUMBER [IFN] [3]:

An Intuitionistic Fuzzy Subset \( \tilde{A} = \{ < x, \mu_{\tilde{A}}(x), \nu_{\tilde{A}}(x) > / x \in X \} \) of the real line \( \mathbb{R} \) is called an Intuitionistic Fuzzy Number, if the following conditions hold,

- There exists \( m \in \mathbb{R} \) such that \( \mu_{\tilde{A}}(m) = 1 \) and \( \nu_{\tilde{A}}(m) = 0 \).
- \( \mu_{\tilde{A}} \) is a continuous function from \( \mathbb{R} \rightarrow [0, 1] \) such that
- \( 0 \leq \mu_{\tilde{A}}(x) + \nu_{\tilde{A}}(x) \leq 1 \) for all \( x \in X \).

The membership and non-membership functions of \( \tilde{A} \) are in the following form

\[
\mu_{\tilde{A}}(x) = \begin{cases} 
0 & \text{for } -\infty < x \leq a_1 \\
f(x) & \text{for } a_1 \leq x \leq a_2 \\
g(x) & \text{for } a_2 \leq x \leq a_3 \\
0 & \text{for } a_3 < x < \infty 
\end{cases}
\]

\[
\nu_{\tilde{A}}(x) = \begin{cases} 
1 & \text{for } -\infty < x \leq a_1' \\
f'(x) & \text{for } a_1' \leq x \leq a_2' \\
g'(x) & \text{for } a_2' \leq x \leq a_3' \\
1 & \text{for } a_3' < x < \infty 
\end{cases}
\]

Where \( f, g, f', g' \) are functions from \( \mathbb{R} \rightarrow [0, 1] \). \( f \) and \( g' \) are strictly increasing functions and \( g \) and \( f' \) are strictly decreasing functions with the conditions \( 0 \leq f(x) + f'(x) \leq 1 \) and \( 0 \leq g(x) + g'(x) \leq 1 \).

II.10. TRIANGULAR INTUITIONISTIC FUZZY NUMBERS [TFIN] [3]:

A Triangular Intuitionistic Fuzzy Number \( \tilde{A} \) is denoted by \( \tilde{A} = (a_1, a_2, a_3) (a_1', a_2', a_3') \). Where \( a_1' \leq a_1 \leq a_2 \leq a_3 \leq a_3' \) with the following membership \( \mu_{\tilde{A}}(x) \) and non-membership fuinction \( \nu_{\tilde{A}}(x) \).

\[
\mu_{\tilde{A}}(x) = \begin{cases} 
\frac{x-a_1}{a_2-a_1} & \text{for } a_1 \leq x \leq a_2 \\
\frac{a_3-x}{a_3-a_2} & \text{for } a_2 \leq x \leq a_3 \\
0 & \text{otherwise}
\end{cases}
\]

\[
\nu_{\tilde{A}}(x) = \begin{cases} 
\frac{a_2-x}{a_2-a_1} & \text{for } a_1' \leq x \leq a_2 \\
\frac{x-a_3}{a_3-a_2} & \text{for } a_2 \leq x \leq a_3' \\
1 & \text{otherwise}
\end{cases}
\]
II.11. TRAPEZOIDAL INTUITIONISTIC FUZZY NUMBERS [TRIFN] [3]:

A Trapezoidal Intuitionistic Fuzzy Number is denoted by $\tilde{A}^I = (a_1, a_2, a_3, a_4)$. Where $a_4' \leq a_1 \leq a_2 \leq a_3 \leq a_4$ with membership and non-membership functions are defined as follows:

$$\mu_{\tilde{A}^I}(x) = \begin{cases} 
\frac{x - a_1}{a_2 - a_1} & \text{for } a_1 \leq x \leq a_2 \\
\frac{a_2 - x}{a_4 - a_3} & \text{for } a_2 \leq x \leq a_3 \\
\frac{a_4 - x}{a_4 - a_3} & \text{for } a_3 \leq x \leq a_4 \\
0 & \text{otherwise}
\end{cases}$$

$$\vartheta_{\tilde{A}^I}(x) = \begin{cases} 
\frac{x - a_4'}{a_2 - a_1} & \text{for } a_1' \leq x \leq a_2 \\
\frac{a_2 - x}{a_4 - a_3} & \text{for } a_2 \leq x \leq a_3 \\
\frac{a_4 - x}{a_4 - a_3} & \text{for } a_3 \leq x \leq a_4' \\
0 & \text{otherwise}
\end{cases}$$

II.12. PENTAGONAL INTUITIONISTIC FUZZY NUMBER [PIFN] [3]:

A Pentagonal Intuitionistic Fuzzy Number $\tilde{A}^I$ is defined as $\tilde{A}^I = \{(a_1, b_1, c_1, d_1, e_1) (a_2, b_2, c_2, d_2, e_2)\}$. Where all $a_1, b_1, c_1, d_1, e_1, a_2, b_2, c_2, d_2, e_2$ are real numbers and its membership function $\mu_{\tilde{A}^I}(x)$, non-membership function $\vartheta_{\tilde{A}^I}(x)$ are given by:

$$\mu_{\tilde{A}^I}(x) = \begin{cases} 
0 & \text{for } x < a_1 \\
\frac{x - a_1}{b_1 - a_1} & \text{for } a_1 \leq x \leq b_1 \\
\frac{x - b_1}{c_1 - b_1} & \text{for } b_1 \leq x \leq c_1 \\
\frac{c_1 - x}{d_1 - c_1} & \text{for } c_1 \leq x \leq d_1 \\
\frac{d_1 - x}{e_1 - d_1} & \text{for } d_1 \leq x \leq e_1 \\
0 & \text{for } x > e_1
\end{cases}$$

$$\vartheta_{\tilde{A}^I}(x) = \begin{cases} 
\frac{1}{b_2 - x} & \text{for } x < a_2 \\
\frac{b_2 - x}{b_2 - a_2} & \text{for } a_2 \leq x \leq b_2 \\
\frac{b_2 - x}{c_2 - x} & \text{for } b_2 \leq x \leq c_2 \\
\frac{c_2 - x}{d_2 - c_2} & \text{for } c_2 \leq x \leq d_2 \\
\frac{d_2 - x}{e_2 - d_2} & \text{for } d_2 \leq x \leq e_2 \\
1 & \text{for } x > e_2
\end{cases}$$

II.13. HEXAGONAL INTUITIONISTIC FUZZY NUMBER [HIFN] [3]:

A Hexagonal Intuitionistic Fuzzy Number is specified by $\tilde{A}^I = (a_1, a_2, a_3, a_4, a_5, a_6)$. Where $a_6' \leq a_1 \leq a_2 \leq a_3 \leq a_4 \leq a_5 \leq a_6$ with membership and non-membership functions are given below:

$$\mu_{\tilde{A}^I}(x) = \begin{cases} 
\frac{x - a_1}{a_2 - a_1} & \text{for } a_1 \leq x \leq a_2 \\
\frac{a_2 - x}{a_3 - a_1} & \text{for } a_2 \leq x \leq a_3 \\
\frac{a_3 - x}{a_4 - a_1} & \text{for } a_3 \leq x \leq a_4 \\
\frac{a_4 - x}{a_5 - a_1} & \text{for } a_4 \leq x \leq a_5 \\
\frac{a_5 - x}{a_6 - a_1} & \text{for } a_5 \leq x \leq a_6 \\
0 & \text{otherwise}
\end{cases}$$

$$\vartheta_{\tilde{A}^I}(x) = \begin{cases} 
\frac{x - a_6'}{a_1 - a_1} & \text{for } a_1' \leq x \leq a_1 \\
\frac{a_1 - x}{a_2 - a_1} & \text{for } a_1 \leq x \leq a_2 \\
\frac{a_2 - x}{a_3 - a_1} & \text{for } a_2 \leq x \leq a_3 \\
\frac{a_3 - x}{a_4 - a_1} & \text{for } a_3 \leq x \leq a_4 \\
\frac{a_4 - x}{a_5 - a_1} & \text{for } a_4 \leq x \leq a_5 \\
\frac{a_5 - x}{a_6 - a_1} & \text{for } a_5 \leq x \leq a_6' \\
0 & \text{otherwise}
\end{cases}$$
III. Octagonal Intuitionistic Fuzzy Number

III.1. OCTAGONAL INTUITIONISTIC FUZZY NUMBER [OIFN]

An Octagonal Intuitionistic Fuzzy Number is specified by $A_{oct} = (a_1, a_2, a_3, a_4, a_5, a_6, a_7, a_8, a_1', a_2', a_3', a_4', a_5', a_6', a_7', a_8')$. Where $a_1, a_2, a_3, a_4, a_5, a_6, a_7, a_8, a_1', a_2', a_3', a_4', a_5', a_6', a_7$ and $a_8$ and its membership and non-membership functions are given below

$$
\mu_{A'}(x) = \begin{cases} 
0 & \text{for } x < a_1 \\
\frac{x-a_1}{a_2-a_1} & \text{for } a_1 \leq x \leq a_2 \\
k & \text{for } a_2 \leq x \leq a_3 \\
k + (1-k)\frac{x-a_3}{a_4-a_3} & \text{for } a_3 \leq x \leq a_4 \\
1 & \text{for } a_4 \leq x \leq a_5 \\
k + (1-k)\frac{a_5-x}{a_6-a_5} & \text{for } a_5 \leq x \leq a_6 \\
k & \text{for } a_6 \leq x \leq a_7 \\
k(\frac{a_8-x}{a_8-a_7}) & \text{for } a_7 \leq x \leq a_8 \\
0 & \text{for } x > a_8 
\end{cases}
$$

$$
\vartheta_{A'}(x) = \begin{cases} 
1 & \text{for } a_1' < x \\
k (\frac{a_2' - x}{a_2' - a_1'}) & \text{for } a_1' \leq x \leq a_2' \\
k & \text{for } a_2' \leq x \leq a_3' \\
k(\frac{a_4' - x}{a_4' - a_3'}) & \text{for } a_3' \leq x \leq a_4' \\
0 & \text{for } a_4' \leq x \leq a_5' \\
k(\frac{x-a_5'}{a_6'-a_5'}) & \text{for } a_5' \leq x \leq a_6' \\
k & \text{for } a_6' \leq x \leq a_7' \\
k + (1-k)(\frac{x-a_7'}{a_8'-a_7'}) & \text{for } a_7' \leq x \leq a_8' \\
1 & \text{for } x > a_8'
\end{cases}
$$
Graphical representation of Octagonal Intuitionistic Fuzzy Number for \( k = 0.5 \)

III.2. ARITHMETIC OPERATIONS ON OCTAGONAL INTUITIONISTIC FUZZY NUMBERS

Let \( \tilde{A}_{oc}^{(1)} = (a_1, a_2, a_3, a_4, a_5, a_6, a_7, a_8) \) and \( \tilde{B}_{oc}^{(1)} = (b_1, b_2, b_3, b_4, b_5, b_6, b_7, b_8) \) be two Octagonal Intuitionistic Fuzzy Numbers, then the arithmetic operations are as follows.

III.2.1. ADDITION

\[ \tilde{A}_{oc}^{(1)} + \tilde{B}_{oc}^{(1)} = (a_1 + b_1, a_2 + b_2, a_3 + b_3, a_4 + b_4, a_5 + b_5, a_6 + b_6, a_7 + b_7, a_8 + b_8) \]

III.2.2. SUBTRACTION

\[ \tilde{A}_{oc}^{(1)} - \tilde{B}_{oc}^{(1)} = (a_1 - b_1, a_2 - b_2, a_3 - b_3, a_4 - b_4, a_5 - b_5, a_6 - b_6, a_7 - b_7, a_8 - b_8) \]

III.2.3. MULTIPLICATION

\[ \tilde{A}_{oc}^{(1)} \ast \tilde{B}_{oc}^{(1)} = (a_1 \cdot b_1, a_2 \cdot b_2, a_3 \cdot b_3, a_4 \cdot b_4, a_5 \cdot b_5, a_6 \cdot b_6, a_7 \cdot b_7, a_8 \cdot b_8) \]

III.3. RANKING OF OCTAGONAL INTUITIONISTIC FUZZY NUMBERS

The ranking function of Octagonal Intuitionistic Fuzzy Number (OIFN) \( \tilde{A}_{oc}^{(1)} = (a_1, a_2, a_3, a_4, a_5, a_6, a_7, a_8) \) maps the set of all Fuzzy numbers to a set of real numbers defined as

\[ R[\tilde{A}_{oc}^{(1)}] = \max \{ Mag_\mu(\tilde{A}_{oc}^{(1)}), Mag_\theta(\tilde{A}_{oc}^{(1)}) \} \]

\[ R[\tilde{B}_{oc}^{(1)}] = \max \{ Mag_\mu(\tilde{B}_{oc}^{(1)}), Mag_\theta(\tilde{B}_{oc}^{(1)}) \} \]

where

\[ Mag_\mu(\tilde{A}_{oc}^{(1)}) = \frac{\sum_{i=1}^{8} 2a_i + 3a_2 + 4a_3 + 5a_4 + 5a_5 + 4a_6 + 3a_7 + 2a_8}{28} \]

III.4. REMARK:

If \( \tilde{A}_{oc}^{(1)} \) and \( \tilde{B}_{oc}^{(1)} \) are any two OIFNs. Then

1. \( \tilde{A}_{oc}^{(1)} \prec \tilde{B}_{oc}^{(1)} \) if \( Mag_\mu(\tilde{A}_{oc}^{(1)}) < Mag_\mu(\tilde{B}_{oc}^{(1)}) \) and \( Mag_\theta(\tilde{A}_{oc}^{(1)}) < Mag_\theta(\tilde{B}_{oc}^{(1)}) \)

2. \( \tilde{A}_{oc}^{(1)} \succ \tilde{B}_{oc}^{(1)} \) if \( Mag_\mu(\tilde{A}_{oc}^{(1)}) > Mag_\mu(\tilde{B}_{oc}^{(1)}) \) and \( Mag_\theta(\tilde{A}_{oc}^{(1)}) > Mag_\theta(\tilde{B}_{oc}^{(1)}) \)
III.5. MODI METHOD

There are many methods to find the basic feasible solution, Modi method is heuristic method. The advantage of this method is that it gives an initial solution which is nearer to an optimal solution. Here in this paper Modi method is suitably modified and used to solving Intuitionistic Fuzzy transportation problem.

Proposed Algorithm

Step –1: In Octagonal Intuitionistic Fuzzy transportation problem (OIFN) the quantities are reduced into an integer using the ranking method called accuracy function.

Step – 2: For an initial basic feasible solution with m + n -1 occupied cell, calculate u_i and v_j for rows and columns. The initial solution can be obtained by any of the three methods discussed earlier.
To start with, any of u_i’s or v_j’s assigned the value zero. It is better to assign zero for a particular u_i or v_j. Where there are maximum numbers of allocations in a row or column respectively, as it will reduce arithmetic work considerably. Then complete the calculation of u_i’s and v_j’s for other rows and columns by using the relation C_{ij} = u_i + v_j for all occupied cells (i,j).

Step – 3: For unoccupied cells, calculate opportunity cost by using the relationship d_{ij} = C_{ij} - (u_i + v_j) for all i and j.

Step – 4: Examine sign of each d_{ij}.
- If d_{ij} > 0, then current basic feasible solution is optimal.
- If d_{ij} = 0, then current basic feasible solution will remain unaffected but an alternative solutions exists.
- If one or more d_{ij} < 0, then an improved solutions can be obtained by entering unoccupied cell (i,j) in the basis. An unoccupied cell having the largest negative value of d_{ij} is chosen for entering into the solution mix (new transportation schedule).

Step – 5: Construct a closed path (or loop) for the unoccupied cell with largest negative opportunity cost. Start the closed path with the selected unoccupied cell and mark a plus sign (+) in this cell, trace a path along the rows (or columns) to an occupied cell, mark the corner with minus sign (-) and continue down the column (or row) to an occupied cell and mark the corner with plus sign (+) and minus sign (-) alternatively, close the path back to the selected unoccupied cell.

Step – 6: Select the smallest quantity amongst the cells marked with minus sign on the corners of closed loop. Allocate this value to the selected unoccupied cell and add it to other occupied cells marked with plus signs and subtract it from the occupied cells marked with minus signs.

Step – 7: Obtain a new improved solution by allocating units to the unoccupied cell according to step – 6 and calculate the new total transportation cost.

Step – 8: Test the revised solution further for optimality. The procedure terminates when all d_{ij} ≥ 0, for unoccupied cells.

III.6. NUMERICAL EXAMPLE:
Consider Supplies and Demands are Octagonal Intuitionistic Fuzzy Number.

| Table 1: To Find Octagonal Intuitionistic Fuzzy |
|-----------------|--------|--------|-------------|
|                | A_1    | A_2    | A_3         |
| \( \bar{A}_{oc} \) | 4.5    | 6.5    | 8.5         |
| \( \bar{B}_{oc} \) | 9.5    | 8.5    | 7.5         |
| Supply          | (3,4,5,6,7,8,9,10) | (8,9,10,11,12,13,14,15) | (6,7,8,9,10,11,12,13) |

DOI: 10.9790/5728-1303026371 www.iosrjournals.org
The problem is a balanced transportation problem. Using the proposed algorithm, the solution of the problem is as follows. Applying accuracy function on Octagonal Intuitionistic Fuzzy Number \([(1,2,3,4,5,6,7,8),(0,1,2,3,4,5,6,7)]\), we have

\[ R(\tilde{A}_{oc}) = \text{Max} \left( \text{Mag}_p(\tilde{A}_{oc}) \right) \]

\[ = \text{Max} \left( \frac{2+6+12+20+25+24+21+16}{5} + \frac{0+3+8+15+20+20+18+14}{5} \right) \]

\[ = \text{Max} [4.5, 3.5] \]

\[ R(\tilde{A}_{oc}) = 4.5 \]

Similarly applying for all the values, we have the following table after ranking.

<table>
<thead>
<tr>
<th>Demand</th>
<th>((7,8,9,10,11,12,13,14))</th>
<th>((2,4,6,7,8,9,10,11))</th>
<th>((1,2,3,5,6,7,8,10))</th>
<th>((4,5,6,7,8,9,10,11))</th>
</tr>
</thead>
</table>

$\Sigma \text{Demand} = \Sigma \text{Supply}$

Applying VAM method, Table corresponding to initial basic feasible solution is

<table>
<thead>
<tr>
<th>A_1</th>
<th>B_1</th>
<th>B_2</th>
<th>B_3</th>
<th>Supply</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.5</td>
<td>6.5</td>
<td>9.5</td>
<td>11.5</td>
<td></td>
</tr>
<tr>
<td>7.5</td>
<td>11.5</td>
<td>8.5</td>
<td>9.5</td>
<td></td>
</tr>
<tr>
<td>8.5</td>
<td>10.5</td>
<td>7.5</td>
<td>5.25</td>
<td></td>
</tr>
<tr>
<td>Demand</td>
<td>10.5</td>
<td>7.25</td>
<td>8.5</td>
<td>26.25</td>
</tr>
</tbody>
</table>

Since the number of occupied cell m+n-1=5 and are also independent. There exist non-negative basic feasible solutions.

The initial transportation cost is

\[ [(4.25 \times 4.5) + (7.25 \times 6.5) + (6.25 \times 7.5) + (3.25 \times 8.5) + (5.25 \times 7.5)] = 180.125 \]

Applying MODI method, table corresponding to optimal solution is

<table>
<thead>
<tr>
<th>A_1</th>
<th>B_1</th>
<th>B_2</th>
<th>B_3</th>
<th>Supply</th>
<th>( u_j )</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.25</td>
<td>4.5</td>
<td>6.5</td>
<td>(4)</td>
<td>9.5</td>
<td>11.5</td>
</tr>

</table>

Since all \( d_{ij} \geq 0 \) the solution in optimum and unique.

The solution is given by \( x_{11} = 4.25 \), \( x_{12} = 7.25 \), \( x_{21} = 6.25 \), \( x_{23} = 3.25 \), \( x_{33} = 5.25 \)

The optimal solution is

\[ = [(4.25 \times 4.5) + (7.25 \times 6.5) + (6.25 \times 7.5) + (3.25 \times 8.5) + (5.25 \times 7.5)] \]

\[ = 180.125 \]

IV. Conclusions

In this paper, we discussed finding optimal solution for Octagonal Intuitionistic Fuzzy Transportation problem. Octagonal Intuitionistic Fuzzy numbers are apply in Supplies and Demands to easily converted. We have used Accuracy function ranking method and Modi Method to easily understand and to arrive at nearer optimum solution. The transportation problems deal with assigning sources and jobs to destinations and machines. We will easily discuss the Transportation problem in Modi method. In future research we would propose generalized Octagonal Intuitionistic Fuzzy Numbers to deal problems and handling real life transportation problem having Intuitionistic Fuzzy Numbers.
