Abstract : *Before we understand how gold created on neutron collision , let us understand origin of earth and periodic table on Earth . It is being believed that after Fe , elements on Earth are formed by Supernova blast . But it is myth .. We are not star dust . Periodic table on Earth is formed by unconditioned thought expressions of Higher centers (Law of nature) . While metals after iron and other elements are formed by Conditioned thought expressions on (law of nature) supernova blast but formation of gold , uranium and platinum are formed by neutron star collision is a lawlessness in nature which is triggered by unconditioned thought expressions . Neutrons are particles and neutron star is produced by mind after the end of life cycle of massive sun not predicted by Chandrasekhar theory of formation of white dwarf, neutron star or black massive body (not black Hole) which is Myth . This phenomenon of formation of Gold , Uranium and platinum in colliding neutron stars by unconditioned thought expression suggests that nucleosynthesis of atoms is a divine mechanism and these are fed thoughts and feeding was done in precreation era by the Highest center of the universe . What is the need of heavy elements when the life cycle of star is over suggests that it is lawlessness in nucleosynthesis of atoms made by Creator B.B.B . It probably shows that Almighty B.B.B could make any law by thought to create any thing from any stuff (particles , atoms , molecules etc) any time whenever He wants .*

I. Introduction

An illustration of two merging neutron stars. This stellar collision created heavy elements such as platinum, uranium and gold. Credit: National Science Foundation/LIGO/Sonoma State University/A. Simonnet

An international team of astronomers detected the first gravitational waves from merging neutron stars, and found proof they are the source of the universe's heavy elements, including gold and platinum. "This is a source we always thought we would see," said David Reitze, executive director of the LIGO observatory, which detected the cosmic ripples called gravitational waves, speaking at a news conference yesterday (Oct. 16). Stellar corpses called neutron-star pairs had been predicted before. "What came next, the emission of light across the electromagnetic spectrum revealed to us by a campaign involving 70 observatories, including seven space-based observatories and every continent on the planet's surface." Gravitational waves are a consequence of Einstein's general theory of relativity, which states that gravity is a curvature in space-time rather than a force. If one imagines any object (a planet, star or even a person) moving through space, the curvature moves, and creates gravitational waves like the wake of a boat. Only really massive objects, like neutron stars and black holes, create waves that are detectable. [The 18 Biggest Unsolved Mysteries in Physics] Neutron stars are the corpses of stars more massive than our sun. At just 12-15 miles (about 20-25 kilometers) across and completely full of neutrons, a neutron star is so dense that a cubic centimeter weighs a million metric tons. When two neutron stars collide, there are two consequences theorists have predicted: The stars would generate the elements heavier than nickel and iron on the periodic table, and emit gravitational waves as they spiral inward. These cosmic ripples in space-time would take energy away from the rapidly orbiting stars, and eventually the neutron stars would collide and merge. The collisions would be the source of elements such as platinum, uranium and gold. The trick was to catch a pair of neutron stars in the act. That's where the Laser Interferometer Gravitational-Wave Observatory (LIGO) in the U.S. and the Virgo Interferometer in Italy came in. Once LIGO had spotted the gravitational waves, astronomers could turn their telescopes in space and on the ground to the region those waves seemed to come from, and pinpoint the source. That was the two neutron stars, located about 130 million light-years from Earth in an elliptical galaxy called NGC 4993, in the constellation Hydra. The gravitational-wave source was designated GW170817, named for the date on which it occurred (Aug. 17, 2017).

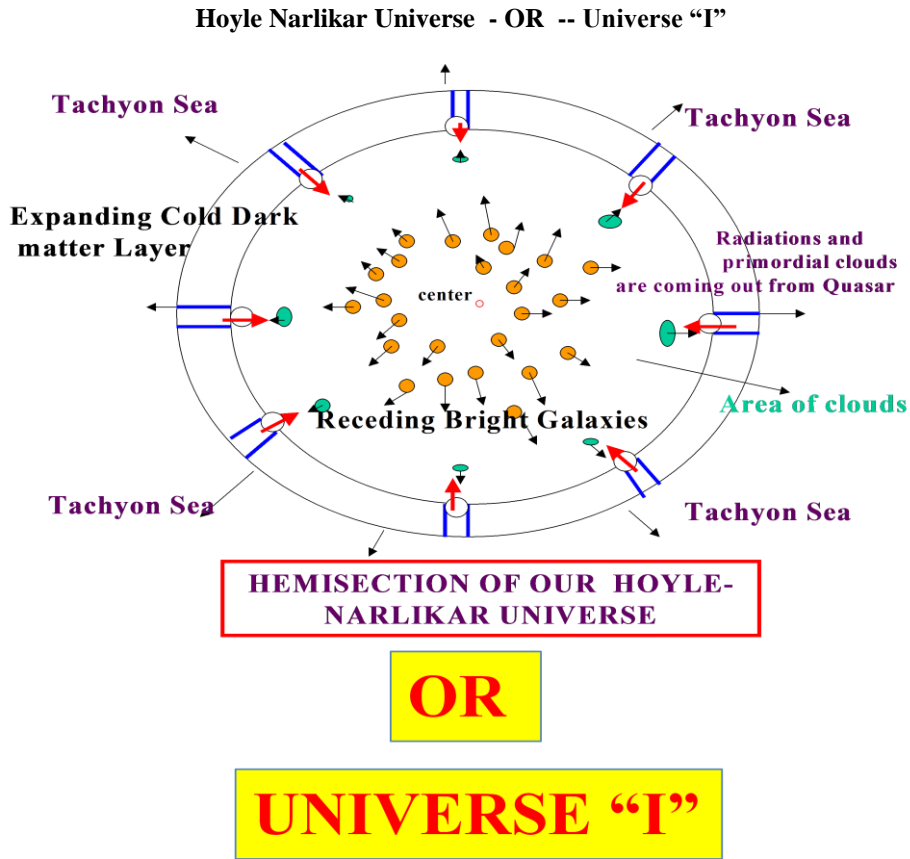

Neutron-star collisions would make "a highly radioactive fireball," said Nial Tanvir, of Leicester University in the U.K., who led the observing team that made the first infrared observations of GW170817 after the gravitational-wave detection. The theory, he said, was that in the violence of the neutron-star collision, heavier elements that form as subatomic particles are smashed together. The team saw the spectra of the neutron stars' infrared light revealed heavy elements, and that a lot of that material gets thrown free. "What happens to this ejected material, is it's going to mix with other gases in the galaxy," Tanvir said.

The finding was an important step in figuring out the origin of heavy, neutron-rich elements in the universe – and the ones we find on Earth. Supernovas were once thought to create such elements, but the process wasn't efficient enough, said Marcelle Soares-Santos, an assistant professor of physics at Brandeis University in Massachusetts. The proportion of heavy elements in Earth seemed too large to be accounted for by the amounts generated by supernovas, she said. [The Mysterious Physics of 7 Everyday Things] Soares-Santos is lead author of the study outlining the first optical observations of GW170817. Scientists had already considered neutron-star collisions good candidates for creating some of the universe's heavy metals, but it wasn't clear how often such smashups occur and how much material they throw into interstellar space.

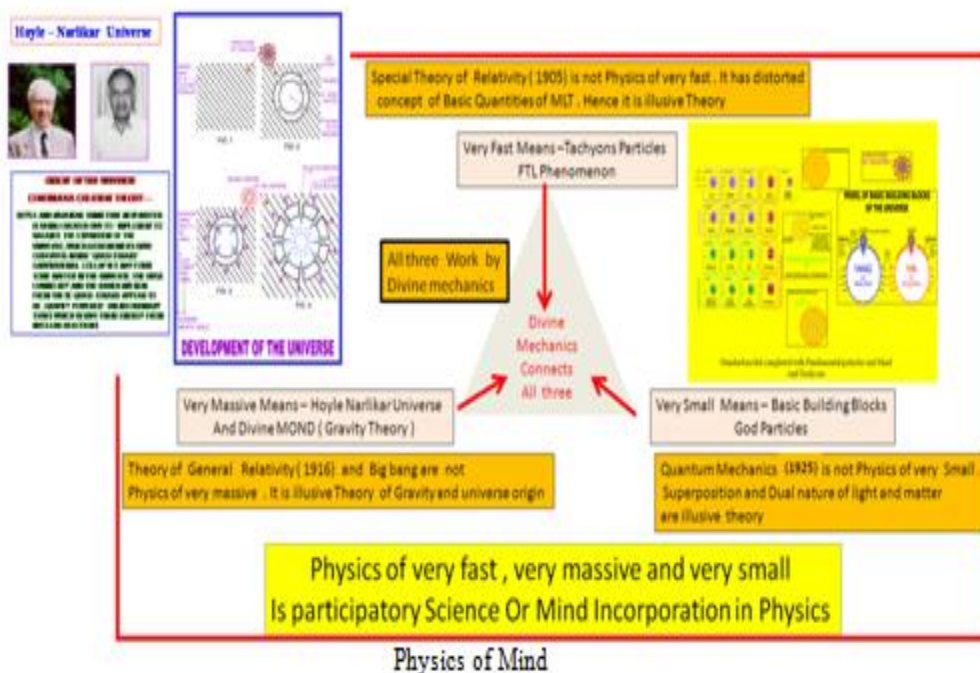

Harvard astronomer Edo Berger, a co-author of the study led by Soares-Santos, said there's now an answer to the latter question: about 16,000 Earth masses, a tiny fraction of the total mass of the two neutron stars. "There's about 10 times the Earth's mass in gold and platinum alone," he said. (Gold makes up a total of about one-millionth of the Earth's mass, and most of that is in the planet's core). All of these heavy elements become part of the interstellar medium and eventually, a fraction end up as part of new planets. Berger said the new data doesn't mean supernovas don't make heavier elements, only that neutron stars seem to be responsible for at least a large portion of it. "With this neutron star channel, we don't have to rely on supernovas," he said. Tanvir said the formation of elements is in one sense a well-understood process. "We know that if conditions are right, this can happen," he said. This observation showed that neutron stars seem to have those conditions, he added.

There are still some open questions, said Berger. "We don't know if this is a typical event, or if other ones in the future will produce more or less of this material," he said. Given estimates of how many such binaries are in the universe, and how much matter the neutron stars flung out, "It seems that we can account for all the heavy elements past iron." This includes the heavy elements we see on Earth, which would have come from the same process before being taken up in the nebula that formed our solar system. Once those elements were present in the neighborhood, they would have coalesced into asteroids which bombarded the Earth as it formed, delivering them to us. The heavy elements thrown out by this neutron-star pair 130 million years ago might eventually end up in new planets, as well. The fact that scientists could use both gravitational waves and light to characterize an object 130 million light-years distant will mean a new kind of astronomy, said Laura

Cadonati, deputy spokeswoman for the LIGO scientific collaboration. "It's like the transition from looking at a black-and-white picture of a volcano to sitting in a 3D IMAX movie showing the explosion of Mount Vesuvius."

What is New Physics or Physics of Mind ?

Quantum Consciousness – According to Physicists and Biologist

The nature of consciousness remains deeply mysterious and profoundly important, with existential, medical and spiritual implication. We know what it is like to *be* conscious – to have awareness, a conscious ‘mind’, but who, or what, are ‘we’ who know such things? How is the subjective nature of phenomenal experience – our ‘inner life’ - to be explained in scientific terms? What consciousness actually *is*, and how it comes about remain unknown. The general assumption in modern science and philosophy - the ‘standard model’ - is that consciousness emerges from complex computation among brain neurons, computation whose currency is seen as neuronal firings (‘spikes’) and synaptic transmissions, equated with binary ‘bits’ in digital computing. Consciousness is presumed to ‘emerge’ from complex neuronal computation, and to have arisen during biological evolution as an adaptation of living systems, extrinsic to the makeup of the universe. On the other hand, spiritual and contemplative traditions, and some scientists and philosophers consider consciousness to be intrinsic, ‘woven into the fabric of the universe’. In these views, conscious precursors and Platonic forms preceded biology, existing all along in the fine scale structure of reality.

My research involves a theory of consciousness which can bridge these two approaches, a theory developed over the past 20 years with eminent British physicist Sir Roger Penrose. Called ‘orchestrated objective reduction’ (‘Orch OR’), it suggests consciousness arises from quantum vibrations in protein polymers called microtubules inside the brain’s neurons, vibrations which interfere, ‘collapse’ and resonate across scale, control neuronal firings, generate consciousness, and connect ultimately to ‘deeper order’ ripples in spacetime geometry. Consciousness is more like music than computation.

Colleagues Travis Craddock and Jack Tuszyński and I also study how anesthetics act in microtubules to erase consciousness, and with Jay Sanguinetti, John JB Allen and Sterling Cooley, we are studying how transcranial ultrasound (TUS) can be used noninvasively to resonate brain microtubules and treat mental, cognitive and neurological disorders. Many thanks to my assistant Abi Behar-Montefiore and Ed Xia for maintaining this website.

1.2 Mind and Mass Realities [2]

Fig. 1 Divine Mechanics Unit – CCP, CP and information s – Code PcPs with B-Bit – Mass

Atomic genetics is the branch of science where we investigate about fundamental interactions of the universe i.e. atomic transcription and translations . New words have been coined to understand hidden science of mind part of reality. Mind reality has been recognized as different faces by “I” about 5000 years back to Arjuna in Mahabharata.as shown in Fig 1. It is just like to understand any language through Alphabets. These are (different faces) Alphabets of mind reality. One Mind reality has one face identity and the second mind reality has second face identity and so on. The facial expression represents phenomenon of intelligence and different faces represent different types of properties carrying property. The open eyes means property is activated while close eye means property is inactivated. In spite of carrying properties consciousness they also know how to conduct not only origin of universe but also how to create two different universe i.e. next creation could be different from this creation . In all, it is automatic system of the universe . The mind realities which are of good properties have devtas face identity (first five faces on both side) and those mind realities which are of bad properties have demons face identity (last four faces on both side) . These are named as code PCPs or messenger atomic genes . The central face is CCP or Thought script where all thoughts of the universe are banked . It is bank of data of all information s of the universe It is face identity of Anti mind particles as data of all information’s of the universe are stored as anti mind particles . It is the Time mind ness (biological clock) that keeps on expressing different thoughts from this thought script (CCP) . There are four more faces (black

bodies) shown on extreme left and right floating in fire are CPs (translating Atomic genes) . That translates the messages and realizes it and reacts accordingly.[2]

1.3. Messages From Biological world to understand B.B.B world as shown in Fig 2 [2]

Fig. 2 Parallel teaching by participatory science

The standard model not only modified rather it has been completed [3] with introduction of energized gravitons , primary fermions, primary bosons , Basic Building Blocks , Mind and Tachyons as shown in Fig 3

Standard model completed with Fundamental particles and Mind And Tachyons

Fig. 3 standard Model chart [3]

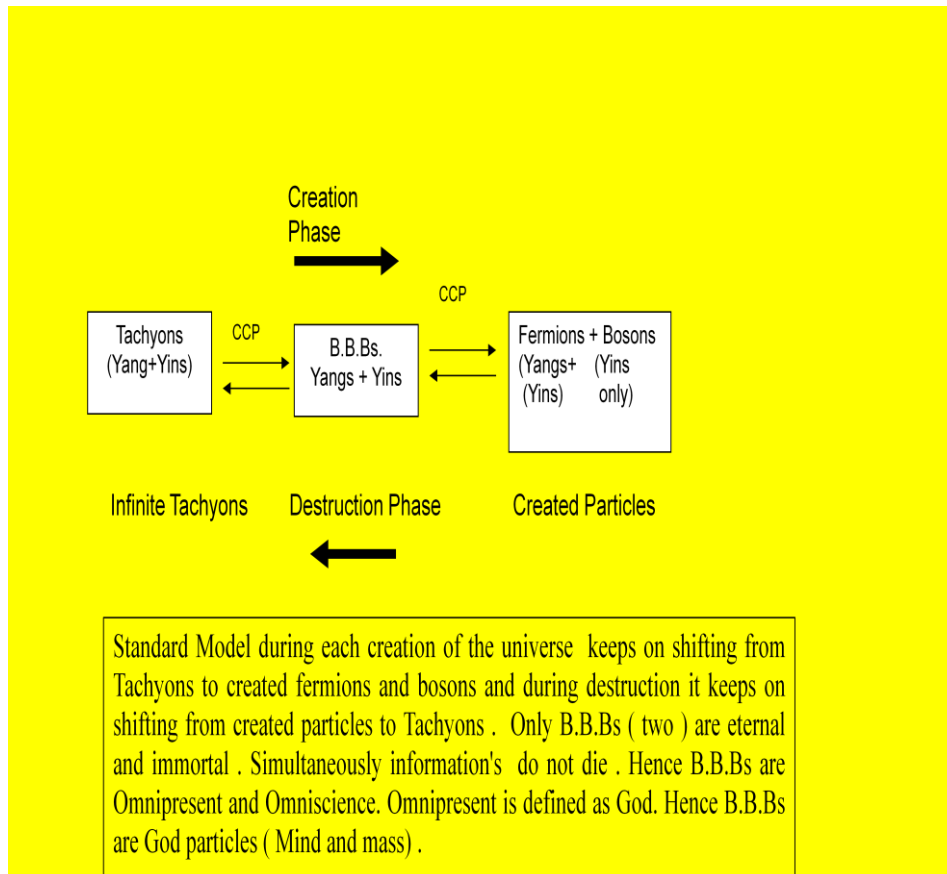

Fig .3.1 one creation and destruction cycle [4]

Participatory science has coined [5] some new words and there are some words which already exist in physics. Both these words are defined here and the definitions are according to participatory science. It has no relation with the definitions given in modern physics.

1.Mass -The part which gives shape to the smallest mass unit i.e. basics building blocks (B. B. Bs.) is called mass.

2.Matter :-Mixture of fermions and bosons or only bosons which are made up of mass (B.B.Bs) and that is why we realize their shape is called matter.

3.Inertial mass :-Mass (smallest mass units i.e. B. B. Bs) having inertial properties (classical inertia) either absolute rest or uniform motion in straight line is called inertial mass. Or Number of B. B. Bs. Per unit space present in bigger units is called inertial mass. Or Total matter contained by the bigger units or total number of fermions and bosons contained by the bigger units is called inertial mass. Therefore it never changes from place to place.

4. Gravitational mass :- The mass (interacting surfaces) which takes part in gravity (divine energized gravitons theory) interaction (which is due to mind) is called gravitational mass. When gravity interaction increases (number of divine energized gravitons increases) the interacting mass (interacting surface) also increases or when interacting mass (interacting surfaces) increases, gravity interaction (number of divine energized gravitons) also increases. Therefore gravitational mass (interacting mass or surfaces) changes from place to place. It is the fed mind that decides gravity interaction. We shall discuss it in gravity chapter and in atomic genetics.

5. Pure m (matter) mass :-matter mass (smallest mass unit or B.B.B) which have got inertial property of absolute rest.

6. Energy mass:-Energy mass (smallest energy mass unit B.B.B) which have got inertial property of uniform motion in straight line and which also gives shape to the bigger energy mass (Higgs Bosons etc) units.

7.m (impure matter) of $E=mc^2$:-Matter particles (fermions) which have got spin property are called impure matter particles.

1.4 Prayer message formation in brain.

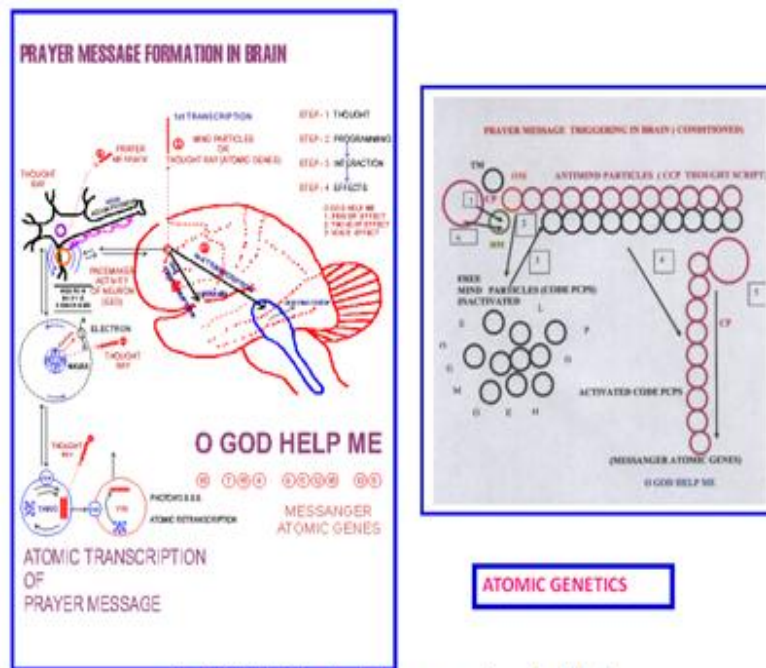

Fig 4 Divine Mechanics - Prayer message formation in brain

In atomic transcription and translation of prayer [5], following steps take place on Yang B.B.B – B-Bit as shown in Figure 4.

- 1.CP removes RM (repressor mindness-green) from OM (operating mindness -orange) thus induction of atomic transcription triggers.
- 2.OM triggers activation of free mind particles (black -inactivated code PCPs) of that thought script (magenta) of “o god help me ”.
- 3.Free mind particles (black -inactivated code PCPs) get attached to anti mind particles script (magenta one) to form messenger thought script of “o god help me ”.
- 4.Messenger atomic genes (black) get activated by anti mind particles thought script and further they get detached from anti mind particles thought script to form activated messenger atomic genes (activated code PCPs) (magenta) of “ o god help me ”
- 5.CP carries phenomenon of splicing by translating the messenger activated atomic genes (activated code PcPs) and finally there is activated message of “ o god help me” is formed .
- 6.CP represses atomic transcription by adding RM (green) to OM (orange) . Thus atomic transcription gets halt. Having formed the message it comes out in three forms .

In atomic genetic engineering (prayer) we use our basic power i.e. power of B.B.Bs. Our B.B.B. (higher center) talks with highest center of the universe by sending the message by first transcription. Till today nobody knows how does the brain generate thoughts. I am going to tell you that mystery too. In the frontal lobe the neurons are responsible for thought generation. In the neuron there is electrical activity called pacemaker activity which is occurring between dendrites and the body of the neuron. The membrane of the cell is made up of atoms and atom is made up of B.B.Bs. At the level of B.B.B. say thought of 'O GOD HELP ME' is expressed. As a result programmed messages of O GOD HELP ME (code PCPs) are formed. Out of three programmed messages, one is carried by atomic genes to highest center of the universe. It is called **THOUGHT**

RAY (Quantum entanglement)

which is made up of pure atomic genes and then the message goes through phenomenon called first transcription. They come out from brain directly. The other two messages are carried by photons from nucleus of atom to electrons. Here they are modulated on electrical activity of the cell called pacemaker activity. Further they are modulated on actions potentials going towards **REALIZING CENTER** situated in brain stem (RAS) and from RAS to speech area situated in the frontal area. Target B.B.Bs. of the realizing center finally realizes thought effect of O GOD HELP ME. While from speech area message goes to motor cortex again via RAS and from there to vocal cords and finally it comes out as a speech effect of O GOD HELP ME. In layman's terminology formation of the thought ray means PRAYER as shown in Fig 4

Where Does Prayer Message go ?

Prayer message goes as shown in Figure 5 to highest center of the universe via first transcription where it is realized and it is accepted, the highest center sends two messages to B.B.Bs working as higher center in cancer cell. These messages are message of inhibition of abnormal thought expression and message of activation of normal thought expression. Having received the messages, higher center stops expressing the abnormal thoughts and it starts expressing the normal thoughts. As a result, there are no more abnormal programmed messages and in place of that normal programmed messages are there. Now the messages have shifted from abnormal (5 and 6) to normal (2 and 3). This shifting of thought expression is called **ATOMIC GENETIC ENGINEERING** as shown in **Figure 4.1** The changed messages reach to target B.B.Bs. through same route. Having received the changed messages, target B.B.Bs. stop expressing the previous programming and they start expressing the normal programming. As a result the cancer cells transmutate into normal cells. **Or diseased cell gets cured [6]** as shown in **Fig 4.1**

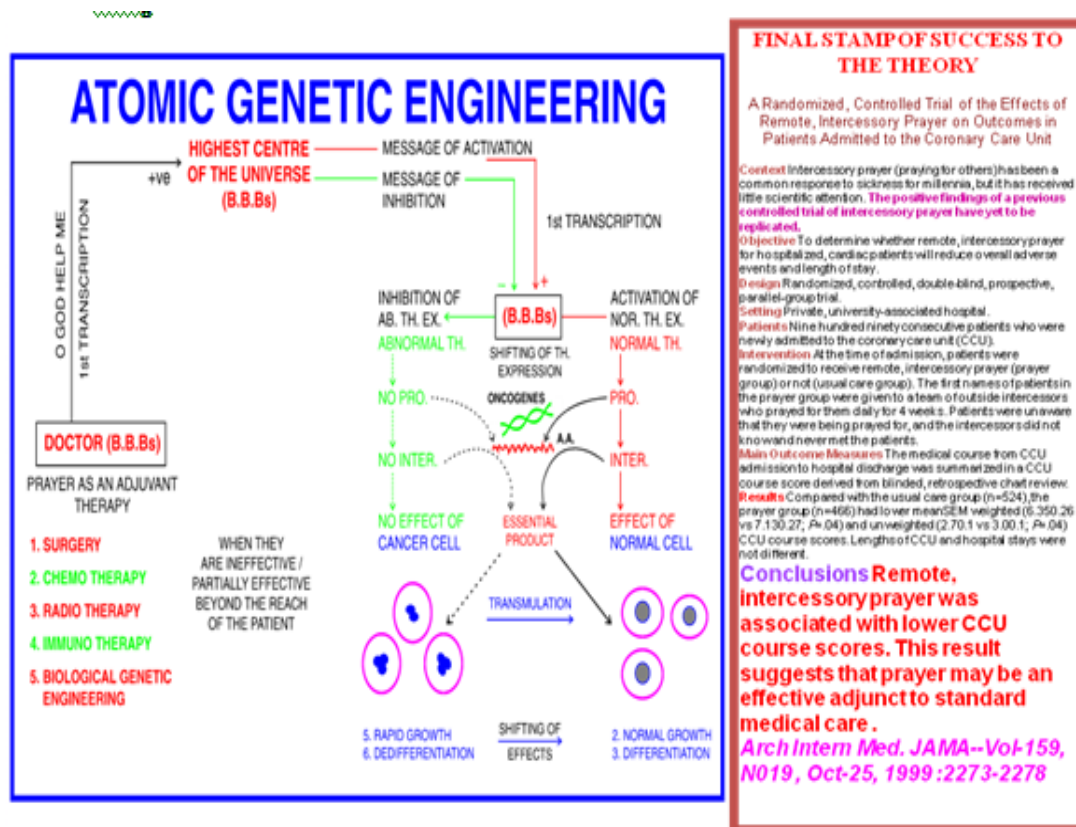

Fig . 4.1 A.G.E and Final stamp of success to New Theory[6]

Before the origin of the universe [2] nature had only one type of message systems which is called **FIRST TRANSCRIPTION**. Messages (Code PcPs) used to go from one B.B.B. to another B.B.B. by atomic transcription. Messages were carried by atomic genes (Code PcPs) with very very high velocity. It is the fundamental message system. After the origin of the universe, nature created atoms. It also created one more message system called second transcription. here the message (code pcps) are carried by photons from one atom to another atom with velocity of light. Thus atoms ,molecules, cells, and even individuals talk with one another

After the formation of the cell , nature created one more system called **THIRD TRANSCRIPTION** .Here there is a message storage system formed by DNA. There are messenger molecules called mRNA that carry message from DNA script to cytoplasm where the message (code PCPs) is read or translated by ribosome and they work accordingly. Thus the messages reach to enzymes and hormones and finally messages reach to target units. Having received the messages, target units work accordingly. Finally life effects (metabolic) are observed. These three types of message systems are working in the nature. These message system are being used by the nature according to nature's need. as shown in Fig 5

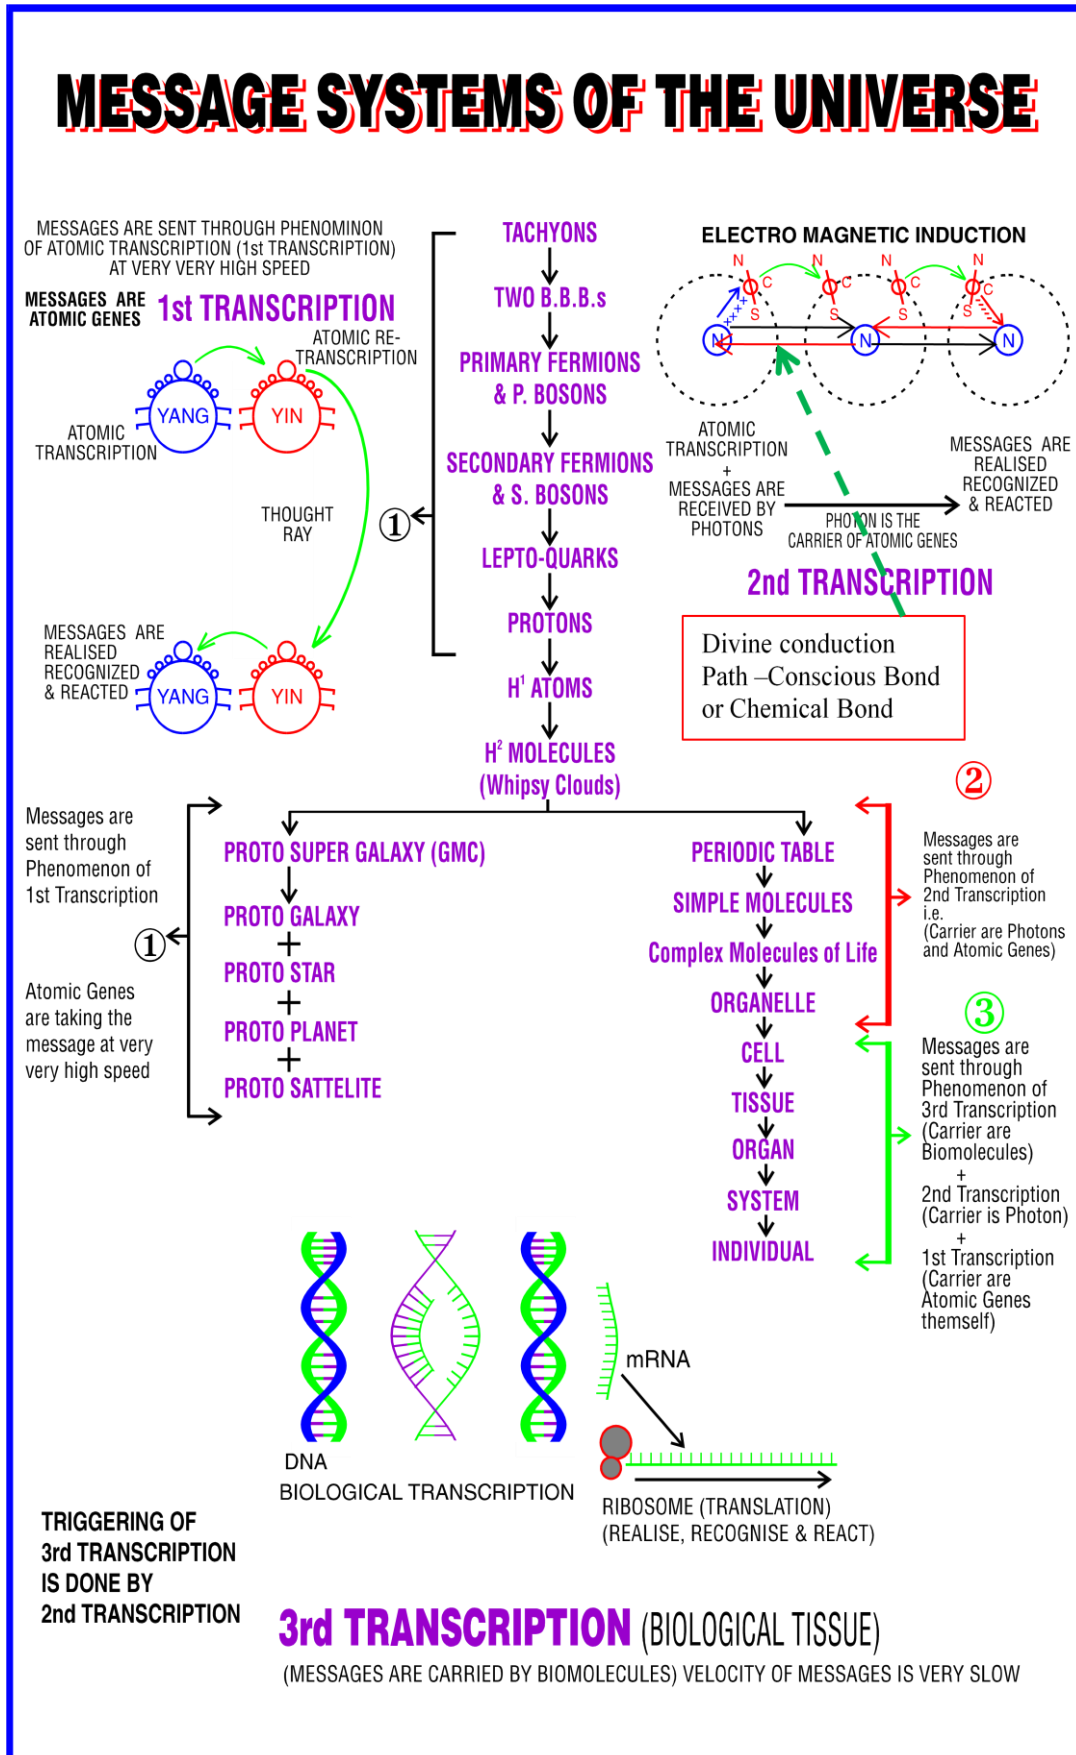

Fig. 5 Messages system of the universe

1.6 How does nature work & triggering of normal & abnormal effects

To understand creation physics as shown in fig 6 and fig 7. there are two types of thought stimulation [2]. one is conditioned thought stimulation and other one is unconditioned thought stimulation. stimulation of thought expression --- there are two types of thought expressions one is conditioned stimulation of thought expression, and other one is self stimulation of thoughts i.e. unconditioned stimulation of thought expression.

At the time of the origin of the universe, all effects got created. The cause of all effects of the universe is Thought expression. These thought expressions were triggered by UNCONDITIONED OR SELF Stimulated Way. It is the first step and it is followed by PROGRAMMING or formation of programmed messages by code PCPs. This programmed message moves from higher centers to target B.B.Bs. it is called INTERACTION. Having received the messages, the mind and mass of the target B.B.Bs. work in a synchronized way so as to produced the effects as thought by a the higher center. If the thought expression by higher center is normal, the shapes, properties and laws produced by target B.B.Bs. would be normal and if the thought expressions are abnormal, the shapes, properties and laws would be abnormal. This is the basic concept of transmutation phenomenon. Finally what we observe is called EFFECT. Appearance of new shapes. properties and laws is called TRANSMUTATION. The first three steps are collectively called CCP. During transmutation process if CCP is written, it does mean that unless the thought, programming and interaction take place, nature cannot transmute. Transmutation phenomenon is seen in particles, atoms, molecules and even in cells. The basic steps of any transmutation remain the same except that the thought expressions differ. The subatomic particle are made up of more fundamental particles called Basic Building Blocks (B.B.Bs) which are made up of mind and mass. These B.B.Bs are divine in nature with the result they talk with each other by phenomenon called atomic transcription and translation (thought expressions). The triggering of broken symmetry is caused by atomic transcriptions. Unless the atomic transcriptions occur, subatomic particles could never exhibit phenomenon of broken symmetry. So the broken symmetry is never spontaneous. It is being mis understood that sub atomic particles do have spontaneous activities as far as broken symmetry is concerned. Hence the Nobel prize physics 2008 awarded to this work is too early to give prize.

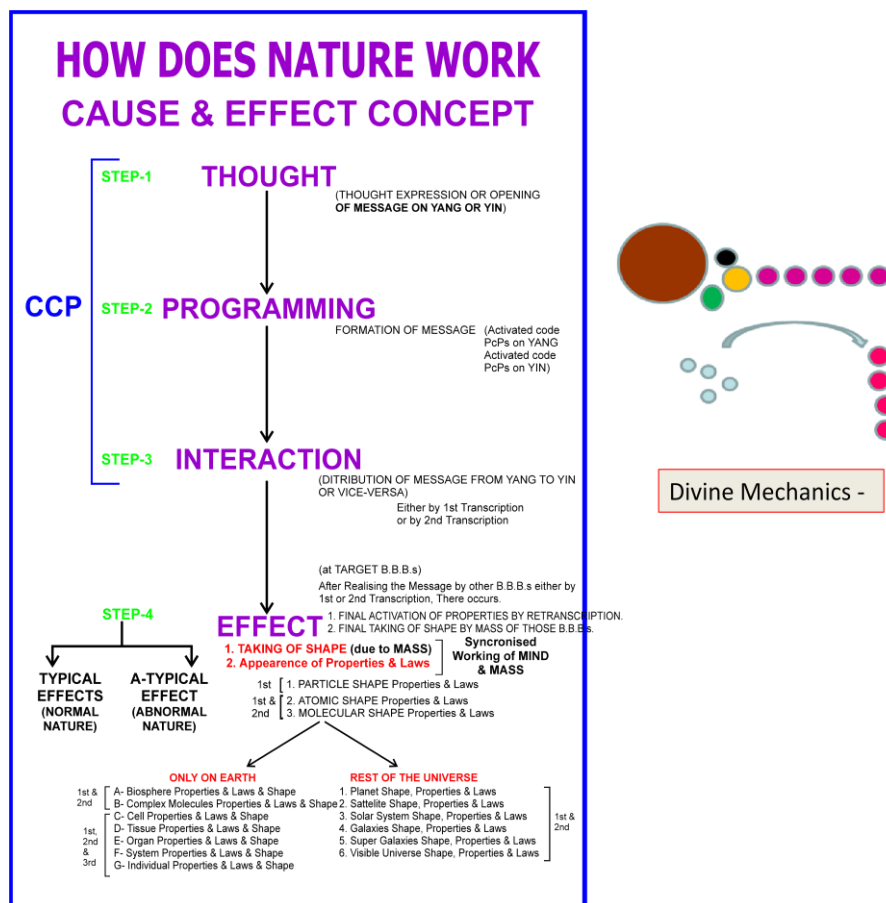

Fig. 6 Divine Mechanics – How Does Nature work ?

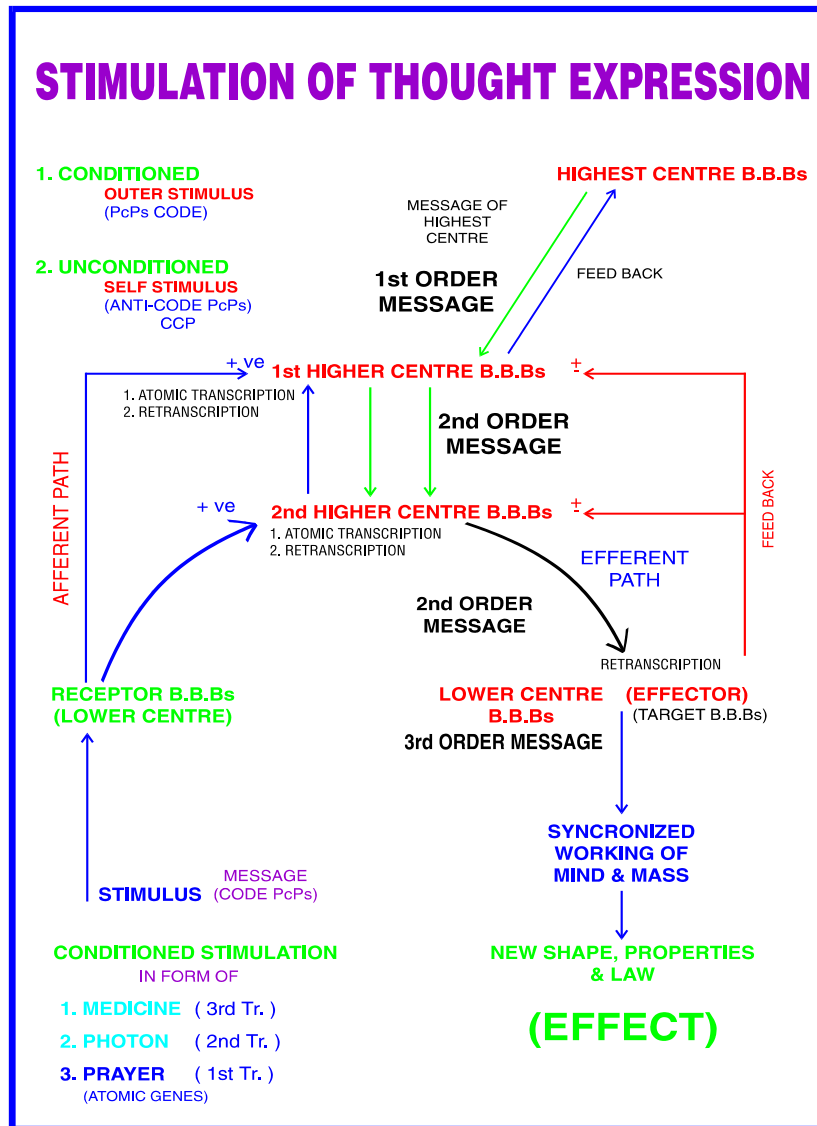

Fig. 7 Conditioned and Unconditioned thought expressions

1.7 Message network of the Universe (Feed Back Mechanism and different centers of the Universe)

With the origin of universe, nature first created primary units i.e. primary fermions (gravitation) and primary boson, these primary units are equipped with one higher center (one B.B.B.) and rest of the B.B.Bs. are working as lower centers or target B.B.Bs.[2] After primary units ,nature created secondary units i.e. secondary fermions and secondary bosons. similarly nature created tertiary units (lepto-quarks) and then quaternary units (protons& neutrons).Each unit is equipped with higher centers, lower centers and target B.B.Bs. After quaternary units nature created atomic units, molecular units, complex molecules of life units, organelle units, cell units, tissue units, organ units, system units and individual units. Each unit is equipped with higher centers, lower centers, and target B.B.Bs. Similarly nature created satellite units, planet units, solar system units, galaxy units, super galaxy units, dark matter layer unit. These units are also equipped with higher centers, lower centers and target B.B.Bs. Thus our universe is divided into different units and each unit is equipped with higher and lower centers.All higher centers are under control of highest center of the universe by efferent paths. This efferent path is made up of first transcription. Higher centers can send messages to highest center of the universe by afferent path or feed back path. Thus highest center of the universe is well informed about all effects of the universe. Messages can come from lower centers to higher centers and from higher centers to highest center of the universe via afferent path. The highest center of the universe can send messages to higher centers and from higher center to lower centers. There is an inter unit message network also which is made up of first, second and third transcription depending upon the nature's need. Thus the entire universe is under control of highest center of the universe. Highest center can change any programming programmed by it during pre creation era as shown in Fig 8

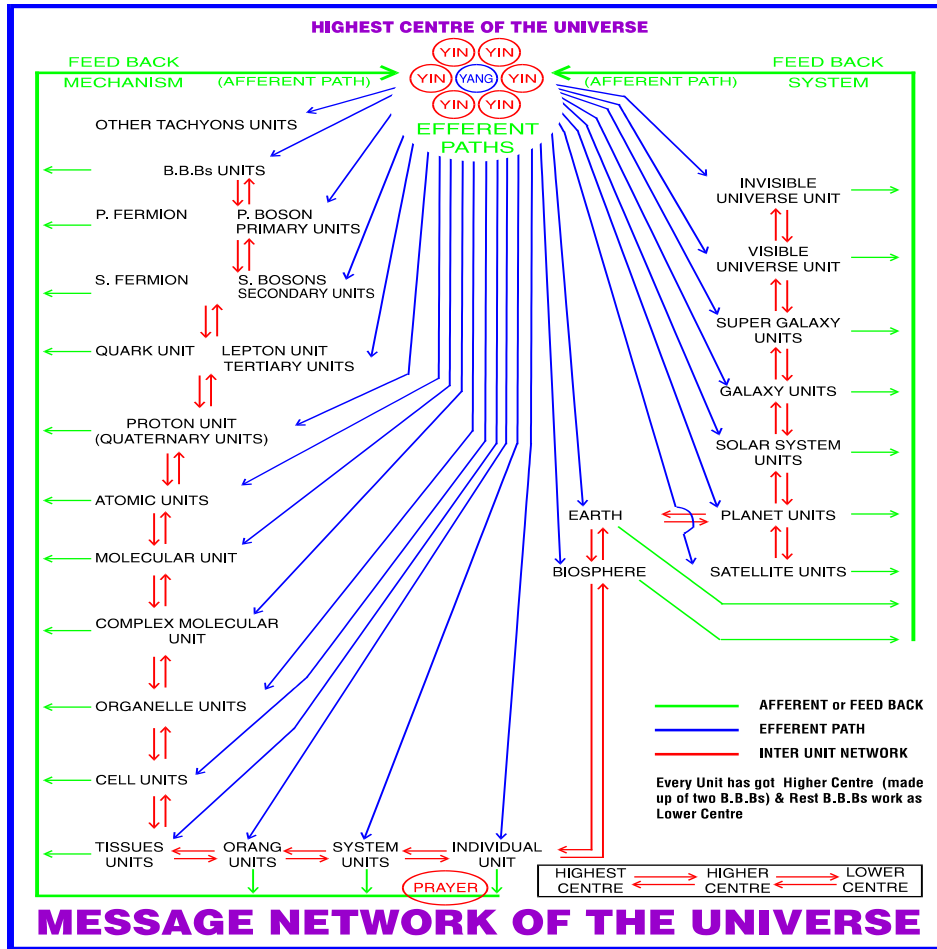

Fig. 8 Messages Net work of the Universe

1.8 Origin of the universe [7]

Hoyle – Narlikar Universe

ORIGIN OF THE UNIVERSE

CONTINUOUS CREATION THEORY

SMALL AND NUMEROUS THINGS THAT NOW MATTER IS BEING CREATED DUE TO "EXPLOSION" TO BALANCE THE EXPANSION OF THE UNIVERSE, WHICH ASTRONOMERS HAVE OBSERVED. THESE "NUCLEO STREAMS" EXPLOSIONS COLLAPSE MAY FORM SOME MATTER IN THE UNIVERSE. THE MORE EXPANSION AND THE DARKNESS FROM THE SE "NUCLEO-STREAMS" APPEAR TO BE "GALAXY PERIODS" AND "NUCLEO STREAMS" WHICH DERIVE THEIR ENERGY FROM NUCLEAR REACTIONS.

DEVELOPMENT OF THE UNIVERSE

UNIVERSE "I"

Fig. 9 Development of the Universe

Before the origin of the universe, these Basic Building Blocks (B.B.Bs) as shown in **Fig-3** were in the form of tachyons as shown in **Fig- 9 [7]**. It means that at that time the tachyons were everywhere in the universe. Let us look at the structure of tachyons; it is made up of one matter B.B.B. (YANG) and many energy (YINs) B.B.Bs. Initially out of the infinite tachyons, one became the **highest center** of the universe. Messages used to go from highest center to rest of the universe and messages could come from rest of the universe to highest center of the universe by atomic transcription.

Thus highest center had fed its thought to rest of the B.B.Bs. that would take part in creation - that they would express only those thoughts to give desired effect as wished by the highest center of the universe. So all B.B.Bs were informed about their role before creation of the universe. In pre-creation era programming of the future universe was done by highest center of the universe. Our universe is oscillating and it is a divine universe. It means that it has a creation phase and a destruction phase. During creation phase tachyons break into their B.B.Bs. and from these B.B.Bs, formation of fermions and bosons take place as shown in **Fig 3.1**. After the creation phase, destruction would start and in this phase all created particles would again break into their B.B.Bs and finally tachyons would form. At the time of origin of the universe, all the effects got created. These effects are taking of different shapes and appearance of properties and laws. All these effects are studied in various branches of science.

With the origin of the universe, nature first created a sphere of **COLD DARK MATTER (C.D.M)** and canals in it. With the result space got created. At the other end of the canals, hot reaction started (**the relics are back ground radiations 2.7 degree K of our hydrogen clouds**). As a result hydrogen clouds and lot of radiations were created. The empty canals were filled by these hydrogen clouds and radiations and thus **QUASARS** appeared in the universe. Simultaneously C.D.M. layer started expanding and clouds and radiations kept on coming in this closed universe as shown in **Fig 9** . With the passage of time more and more C.D.M. layer formed, more and more quasars formed. The hydrogen cloud came in this closed universe. They started running towards C.D.M. layer as they were attracted by the gravity of C.D.M. layer. Those clouds, which were nearer, moved faster than those, which were away from CDM Layer. The **HUBBLE LAW**, can thus be explained.

With some more passage of time, clouds were joined to form **GMC** (giant molecular clouds). Later by self-gravitation different proto stars, proto planets, proto satellites were formed. Finally stars became bright and thus bright galaxies appeared in this universe. Our universe is still in expansion phase and creation is still going inside quasars. It is to be remembered that highest center of the universe does not come in the visible universe. It keeps on receiving the messages by atomic transcription and it has power to change any programming programmed by it during pre-creation era.

It is the atomic genes which constitutes mind part of reality. Mind incorporation in physics is awaited as theory of every thing is not yet investigated . I have investigated theory of every thing (ToE) and I found that while studying unified theory at the time of origin of the universe by Hoyle Narlikar universe , it was mind reality that triggered symmetry breaking phase . It is mind reality that triggers oscillation phenomenon of the universe. It is the mind reality which is behind perfect cosmological principle .

There is nothing like artificial intelligence in the universe . These mind particles constitute intelligence of the universe that controls the deterministic order of the universe. It is the mind reality behind all effects of the universe. But this is not our mind rather it is mind of Almighty B.B.B (Yang B.B.B or matter B.B.B. or Male B.B.B working as Highest center of the universe) . His mind could be manipulated by prayer only . as shown in figure 9.1and 9.2

1.10 Divine Mechanics and Brain Computation

earning and Memory and information s (Code PcPs) Net work in Brain [10]

Divine Mechanics and Brain Computation

Fig 12 Divine Mechanics of Brain Computing System – Learning and memory

At all steps , these are B.B.Bs (B-Bit) that are responsible for information’s control and triggering . If CCP is written it means unless atomic transcription and translation occur , brain cannot have learning and memory triggering and control and it is called Divine mechanics of Biology and it is life . These are higher thought expressions of B.B.Bs . In Bits of classical computers and qubits of QC , the thought expressions are lower and different but the mechanics (DIVINE) remains the same. as shown in Fig 12

Fig 13- The Theory of Computers and Brain are same – DIVINE MECHANICS

(Structural and Functional smallest Bit (mass) is B-Bit of the universe and the Divine Mechanical Unit is CCP , Code PcPs and CP.)

Divine Mechanics The Theory of Computers and Brain is SAME as shown in Fig 13

Physics dictates the lowest limits of the size of chips [11]. But divine mechanics does not . Hence the bit is a typical unit of information. ((Classical and Quantum Bit) is wrong and to describe informations by adding qubit is also illusion as in complicate system ,it is the different thoughts expressions that describe informations . Informations are separate (Code PcPs) and bits (Electron of transistor) qubits (electron of diamond crystal) are separate. At DNA level the bit is nucleotide (A,T,C,G) and at Atomic level the bit is photon and electron , at particle level (secondary fermions and secondary bosons) the bit is primary fermions and primary bosons and informations are still code PcPs and at B.B.B level the bit is B.B.B (Yang mass and Yin mass - B- bit) it self and the information is carried by Code PcPs but at all level of all bit units the information storage system is CCP (Physiological arrow of Time) it never dies even after destruction of the universe. Hence informations are eternal . In computers, Bit is a structural configuration that describes informations of the system and informations are in form of Code PcPs. The working of the bit is triggered and controlled by thoughts of higher centers that form that bit. If the bit is classical (transistors of chips) the effect is different . But if the bit is qubit with entanglement the working is triggered and controlled by thoughts of higher center that form that crystal . In both the effect of describing informations would be different. One is classical (thought expressions are fixed and limited)and other one is quantum (thought expressions are changing and more wide to describe the more wide complicated system to have fast results .) . In life sciences in Brain the bit is again Photon and the informations are Code PcPs and they are triggered and controlled by CCP of higher centers that is triggered by DIVINE MECHANICS . In life sciences the CCP (cryptography) of B-bit expresses informations (Code PcPs) which were not fed like speaking Lie and unlike Bit of classical computer and qubit of QC it shows phenomenon of forgetfulness and IQ phenomenon (mental age /real age) . It is Higher functions of B.B.B or B Bit and it is life . Hence there is difference in some aspect of DIVINE MECHANICS \of Computers computation and Brain computation

II. Structure

2.1 Nucleosynthesis (Fig 14)

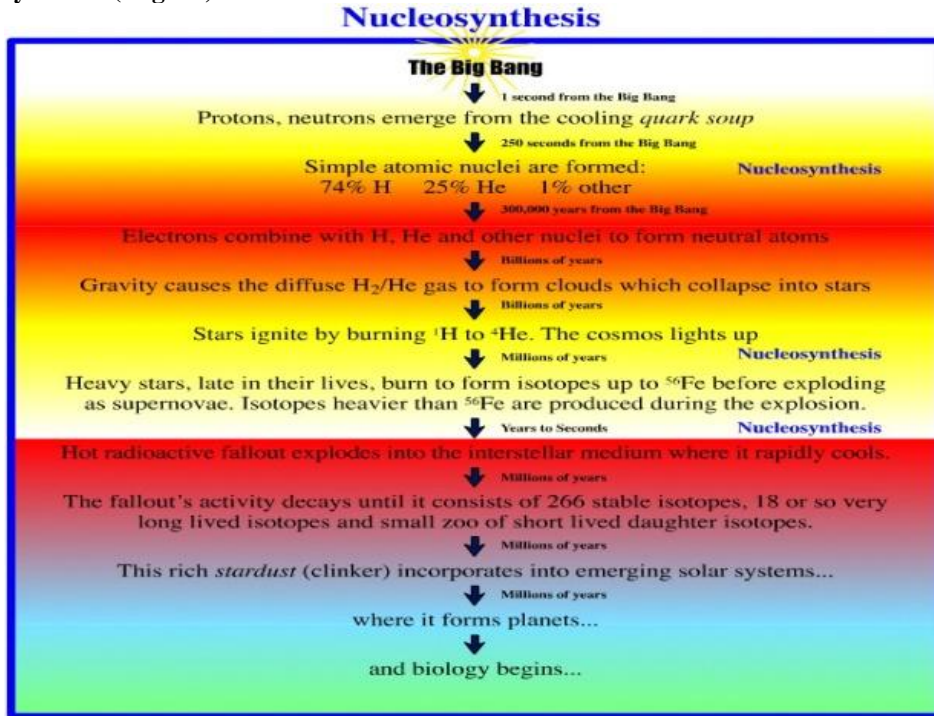

Figure 14 wrong depiction of nucleosynthesis

To understand phenomenon of nucleosynthesis on **quasars, stars, planets, satellites ,asteroids**, we have to understand about how does nature work (Figure 15) , conditioned and unconditioned expressions of atomic genes (Figure -16) .

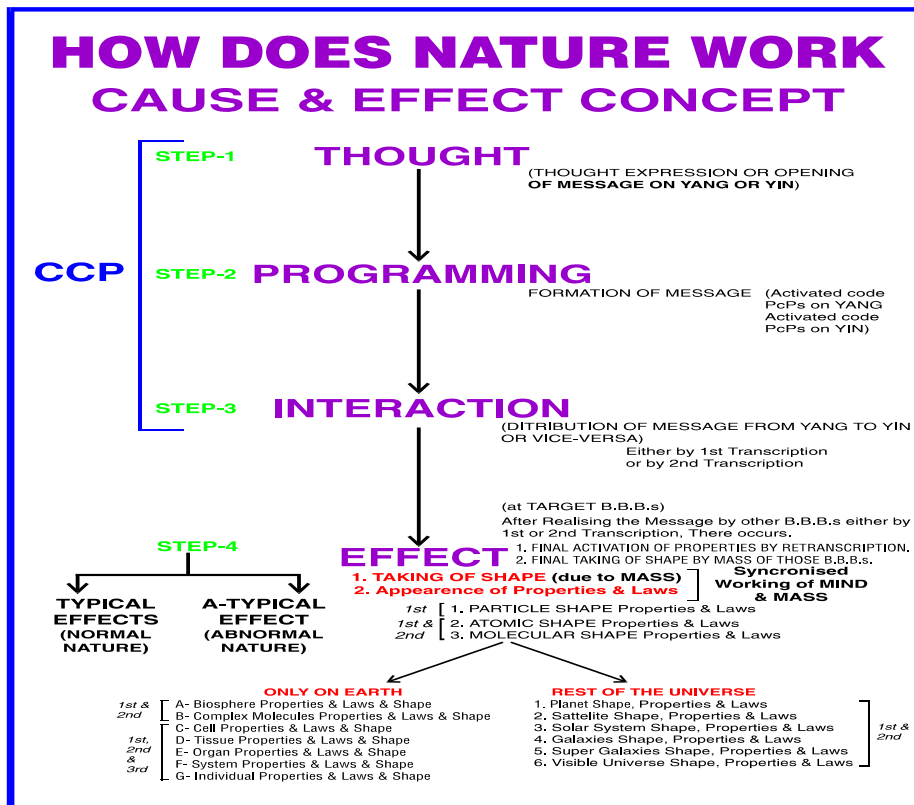

Figure 15 How does nature work

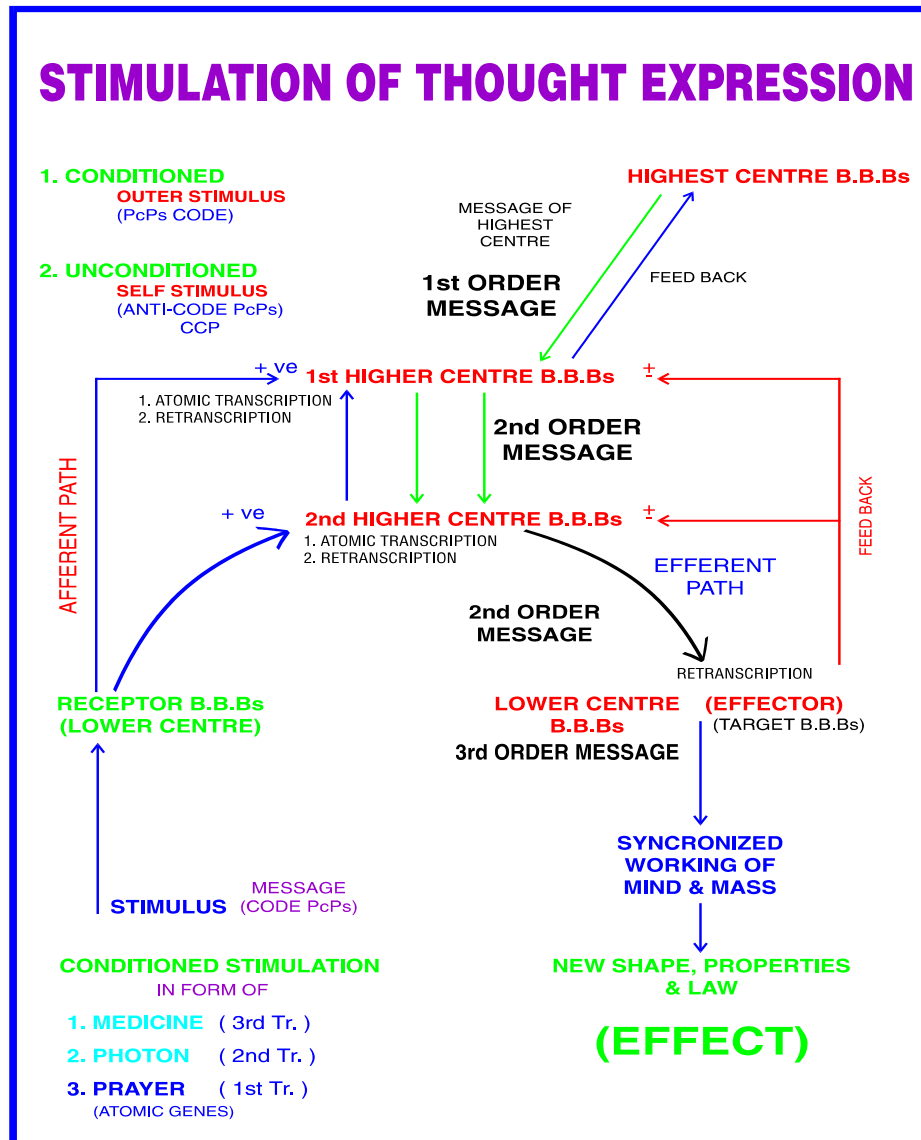

Figure 16 stimulation of thought expressions

2.2 Origin of the Earth (Figure 17)

Till today it is believed that earth is the part of sun and sun is second generation star. There are observations which contradict this hypothesis. After the formation of rotating GMC (giant molecular cloud), there developed many nidus (B.B.Bs working as higher centers) in the rotating nebula. These higher centers expressed thoughts of condensation of nebula in different sectors that will give rise to formation of proto stars, protoplanets, proto satellites and proto asteroids and thoughts of contraction or collapse that will cause shrinkage of proto star, protoplanets and proto satellite. The formation of asteroid belt is due to thought expression of clumping or collapse. Thus there developed many different sectors in same nebula. Along with this the spin thoughts were also triggered. This led to development of spin of proto star, protoplanets, proto satellites and proto asteroids. Finally the nebula transformed into proto star, protoplanets, proto satellites and proto asteroids. About 4.6 billion years ago, formation of our solar system took place. (Figure 17) In these proto star, protoplanets, proto satellites, proto asteroids many other different thought expressions were expressed by many other higher centers (B.B.Bs) that had led to formation of sun, different planets, different satellites and asteroid belt between mars and Jupiter. ALL ARE BORN FROM SEPARATE NEBULAR SECTORS AND THUS THEY ARE CREATED WHERE THEY ARE PRESENT NOW IN ORBIT. They all have their different shapes, size, different properties, different compositions and behavior which were triggered by many different higher centers. The asteroid belt present between Mars and Jupiter was created from proto asteroid by phenomenon of clumping. THIS WAS ALL DUE TO UNCONDITIONED THOUGHT EXPRESSIONS OF B.B.Bs. (Figure 16)

Origin of Solar system (Figure 17)

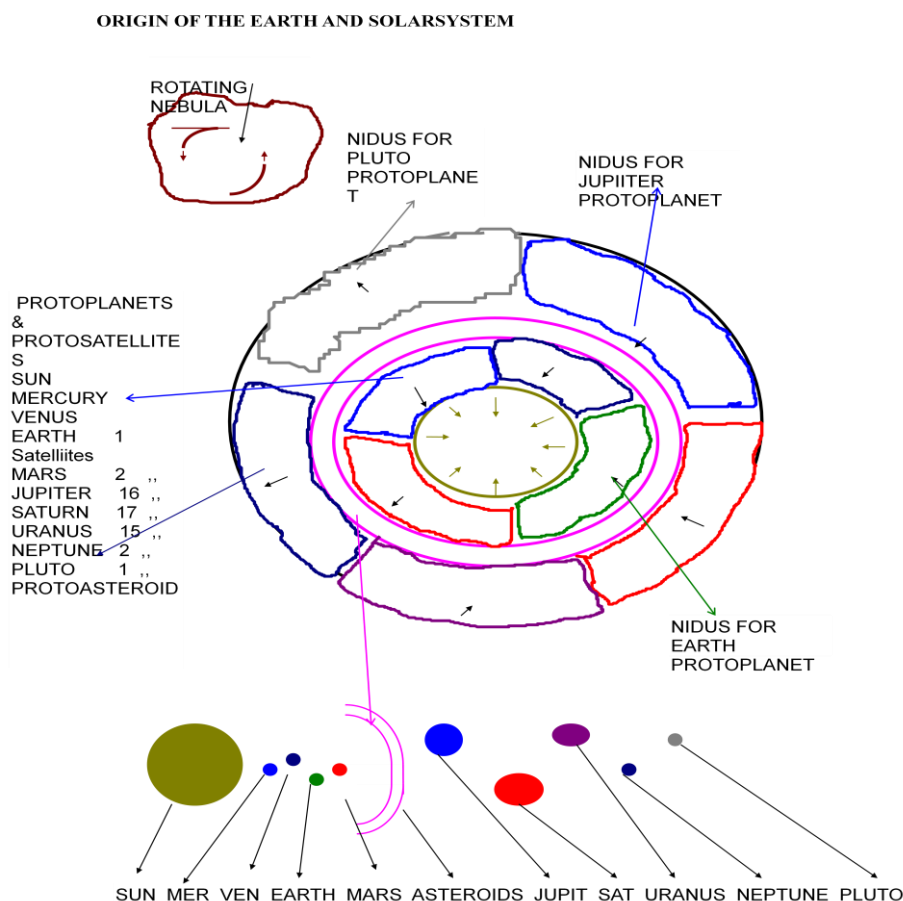

Figure -17 origin of solar system

Origin of continents and their shifting (Figure 18)

When the Earth was forming , there developed many other higher centers for different thought expressions. These were--

1. Thought expressions of formation of continents and water.
2. Thought expressions of formation of different layers of the earth. (Figure 19)
3. Thought expressions of formation of different layers of atmosphere.

And thus Pangaea continent, sea, different layers of earth, and different layers of atmosphere were formed by target B.B.Bs. (Figure 18) Simultaneously there developed other higher centers which expressed following thoughts--

1. Thought expression of ignition of the core
2. Thought expression of magma.
3. Thought expressions of shifting of continents.(Figure 18)
4. Thought expressions of seismic foci
5. Thought expression of water cycle

And thus formation of heat in the core, magma in mantle layer, seismic foci in lithosphere, shifting of different continents in their respective directions and appearance of water cycle took place by different target B.B.Bs. This was all triggered by unconditioned working of B.B.Bs. The entire transmutation took place simultaneously.

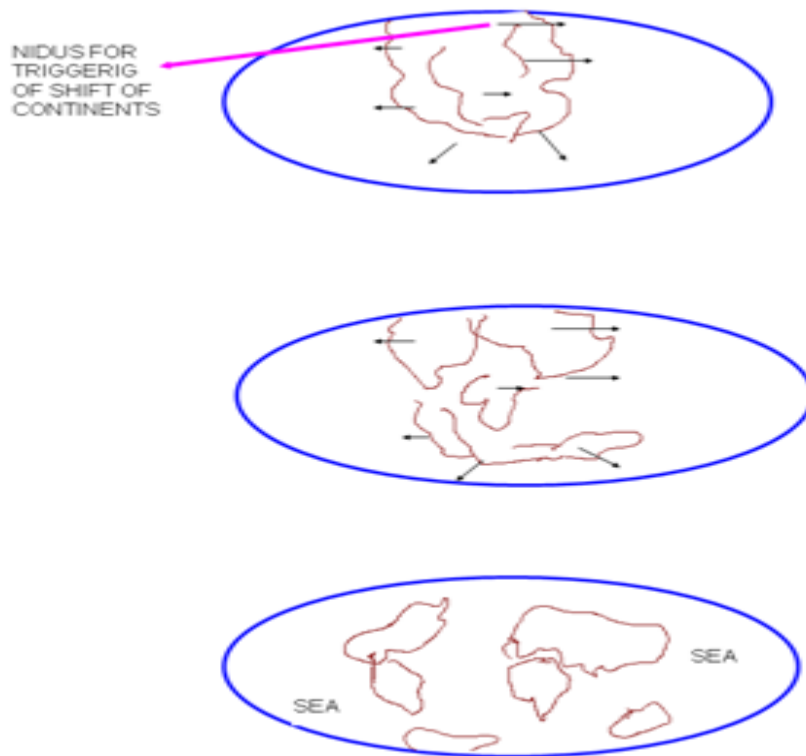

Figure 18 Origin of continents and their shift

Figure 19 Layers of Earth

2.3 Neucleosynthesis by unconditioned or conditioned thought expressions - Having equipped with some knowledge of origin of universe, origin of solar system, origin of earth and moon , and asteroid belt (Figure 17), it is now clear that all these celestial bodies were formed separately from the rotating nebula made up of hydrogen and helium. These all celestial bodies were formed directly from nebula by unconditioned working of

nature . Hence nucleosynthesis took place by unconditioned working of thought expressions while these celestial bodies were forming except sun.

In **quasars** where apart from formation of hydrogen atoms from tachyons , nature also formed some other elements from created hydrogen by unconditioned working of thought expressions. If we see spectrum of quasars , we could see those elements which are being created there.

Quasar redshifts are measured from the strong spectral lines that dominate their optical and ultraviolet spectra.

These lines are brighter than the continuous spectrum, so they are called 'emission' lines. They have widths of several percent of the speed of light. These widths are due to Doppler shifts caused by the high speeds of the gas emitting the lines. Fast motions strongly indicate a large mass. **Emission lines of hydrogen (mainly of the Lyman series and Balmer series), helium, carbon, magnesium, iron and oxygen are the brightest lines.** The atoms emitting these lines range from neutral to highly ionized, i.e., many of the electrons are stripped off the ion, leaving it highly charged. This wide range of ionization shows that the gas is highly irradiated by the quasar, not merely hot, and not by stars, which cannot produce such a wide range of ionization. Iron quasars show strong emission lines resulting from low ionization iron (FeII), such as IRAS 18508-7815.

This type of nucleosynthesis is being taking place while creation is going on . Hence we can assume that nucleosynthesis could be made by **unconditioned working** of thought expressions.

When this GMC that was created in the quasar ejected out in the closed universe, where hydrogen and helium were predominantly in high percentage, transformed into proto stars, proto planets and proto satellites and proto asteroid by unconditioned working of thought expressions.

In **stars**, with the triggering of nuclear fusion , there started again formation of new elements. **Now this time it was conditioned working of thought expression which could lead to new nuclei formation .** But on planets and satellites ,and in asteroid belt , nucleosynthesis took place by unconditioned thought expressions and with the result during the formation of planets and satellite and asteroid belt , new atoms were created , which formed them and they are still existing on that celestial bodies. These atoms were joined to form molecules, complex molecule of life and finally living cells by unconditioned working of thought expression. Life is nothing but higher thought expressions of B.B.Bs . Formation of simple molecules are due to lower thought expressions of these B.B.Bs.

III. Conclusions

1. It is believed that first nucleosynthesis (H and He) took place after the Big bang . Second nucleosynthesis (upto Fe) took place during star formation when nuclear fusion started and last nucleosynthesis (beyond Fe) took place during supernova explosion . Only three times nucleosynthesis took place during formation of solar system and Earth. It is all Myth and illusion .
2. Quasars are believed to be the ANG(active nuclear galaxies) and they are equipped with black holes . It is all Myth and illusion.
3. Earth is part of Sun and sun is second generation star and moon is the part of earth and it was formed by collision of earth with some passing celestial object. It is all myth and illusion.
4. Earth is the part of sun as it is hot inside and crust (Land and water) of earth formed by cooling of the surface . Continental shift is due to strike of big asteroid or comet that led to their shifting . It is all myth and illusion.
5. Earth quakes are due to Global plate tectonic movement and collisions. It can never be predicted and prevented. Hence it is a permanent defect in earth which could never be corrected. It is all Myth and illusions .

IV. Discussion

Having equipped with knowledge of Mind and Mass It is now clear unless mind triggers , nature cannot give effect of nucleosynthesis . Triggering of Mind is of two types one is conditioned i.e. outer stimulus triggers nucleosynthesis that happens on Sun and supernova explosion. Second one is unconditioned triggering of Mind i.e. self stimulation of nucleosynthesis that happened in quasars, planets , moons and on asteroids. All thoughts are fed thoughts and this feeding was done by Highest center of the universe in pre creation era.

2. The Law of nucleosynthesis states that there is one law in nucleosynthesis that there is no law except wish of Almighty or highest center of universe that programmed our universe during pre creation era. Hence periodic table (number of elements and their amount or percentage) of Quasars, Suns, supernova explosion, planets, moons, asteroids would never be same.

3. We are NOT star dust.

4.1 Self gravity and Life cycle of stars and Chandrasekhar limit .

Figure 19 Life cycle of star and Chandrasekhar Limit

Figure 19.1 Life cycle of star

4.2 Self Gravity

There is nothing like self gravity phenomenon. The nebula used to collapse to form celestial object (sun , planets, satellites and asteroids or comet) only when thought of collapse was triggered. Reaching up to a desired collapse , it is the **thought of halt** that prevents its further collapse. All thoughts are fed thoughts and feeding was done in pre creation era by the highest center of the universe. It is the higher center in sun that triggers the collapse phenomenon . The messages are shifted to lower centers of atoms and particles of sun to be involved in collapse phenomenon. Having received the messages by lower centers, the messages are shifted to target B.B.Bs , mind and mass (B.B.Bs) of Target units start collapsing . With the result we observe collapse phenomenon. Same mechanics is applied for halting of collapse. Hence it is the thought that triggers the collapse and halt of collapse rather than any degeneracy (electron or neutron) during celestial body formation i.e. formation of white dwarf or neutron star or so called black hole (black massive body) formation . The size of the our sun is not being maintained by balance of radiation pressure (heat pressure) vs gravitational collapse . It is due to thought of that size (numerical mindness activated) . During red giant formation this numerical mindness changes with the result size of the sun increases at the end of the stage of star. It has nothing to do with Chandrasekhar limit of 1.44 solar masses . The formation of red Giant is decided due to triggering of that thought rather than the mass of the sun . Hence it is illusion that sun masses decide the fate of star . Hence theory given by Prof Chandrasekhar for formation of White dwarf, neutron star or so called Black hole is a wrong theory .

It is the type of seed masses that doesnot decide the type of plant or tree formation rather it is the MIND in side seed mass that decides the type of plant or tree to be formed .(Fig 19.2)

Fig 19.2 It the mind that designs the fate of seeds rather than their masses . (biological analogy)

Atomic transcription of Fate of different masses of suns (micro level)

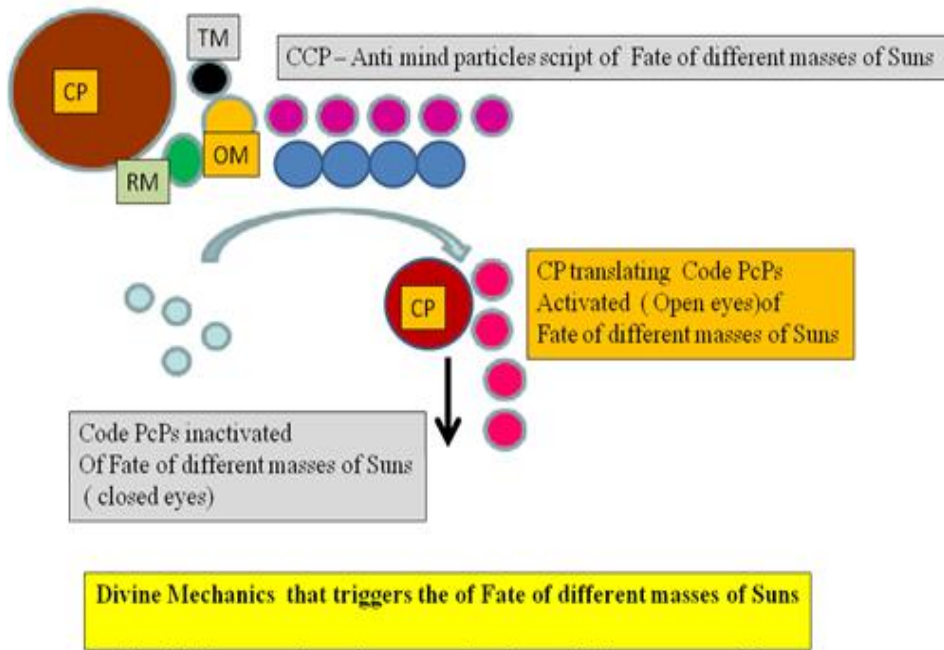

Fig. 20 Divine mechanics that triggers the Fate of different masses of Suns

In atomic transcription and translation of Fate of different masses of Suns following steps take place on Yang B.B.B – B-Bit as shown in Figure 20 . Time mindness triggers and regulate the mechanism step by step.

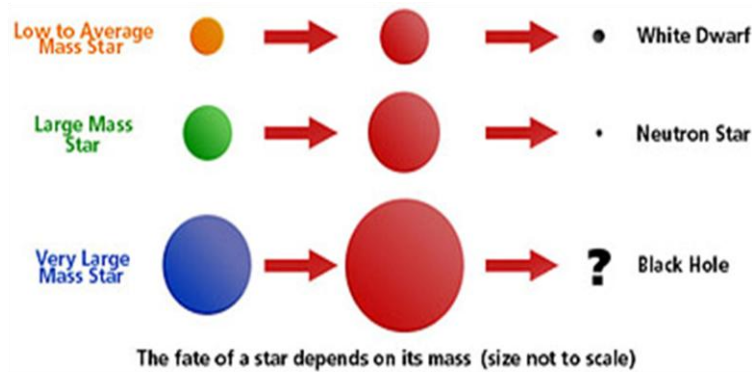

1. CP removes RM (repressor mindness-green) from OM (operating mindness -orange) thus induction of “Fate of different masses of Suns”atomic transcription triggers.
2. OM triggers activation of free mind particles (sky blue -inactivated code PCPs) of that thought script (magenta) of “Fate of different masses of Suns”.
3. Free mind particles (sky blue -inactivated code PCPs) get attached to anti mind particles script (magenta one) to form messenger thought script of “Fate of different masses of Suns”.
4. Messenger atomic genes (blue) get activated by anti mind particles thought script and further they get detached from anti mind particles thought script to form activated messenger atomic genes (activated code PCPs) (red) of “Fate of different masses of Suns”

5. CP carries phenomenon of splicing by translating the messenger activated atomic genes (activated code PcPs) and finally there is activated message of “Fate of different masses of Suns” is formed .
6. CP represses atomic transcription by adding RM (green) to OM (orange) . Thus atomic transcription gets halt.

This Code PcPs Fate of different masses of Suns spread in other B.B.Bs . Having received the messages of Fate of different masses of Suns , the target B.B.Bs work accordingly and we see the effects as destined by highest center of the universe. That is how Time mindness triggers **Fate of different masses of Suns** by divine mechanics

4.2 Wrong and Right depiction of Fate of Stars (macro level)

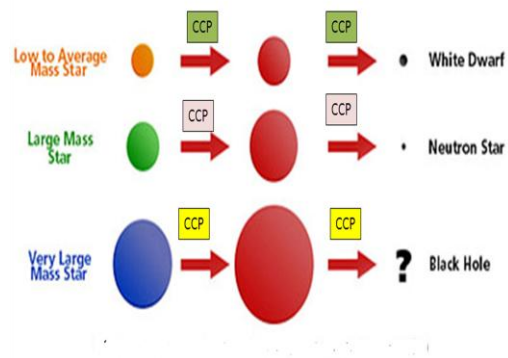

It is illusion that sun masses decide the fate of star. Hence theory given by Prof Chandrasekhar for formation of White dwarf, neutron star or so called Black hole is a wrong theory as shown in Fig 21 .

Marks Allotted to the work is ZERO out of Ten
As Divine mechanics is Absent . Mathematical Theory Does Not Have thought of mind and Thought of Creator . Hence It is Fake theory .

Fig 21 wrong Depiction --The Fate of stars depends upon its mass is myth

TRIGGERING AND REGULATION OF Fate of different masses of Suns or stars
Stars are Divine Units . Their Working is triggered by Thought . Unless different thoughts are expressed Stars cannot enter in to transformations of different units like Red giant , white dwarf, neutron star or so called black hole
At each step of Transformation , if CCP is written , it means Divine Mechanics is first in action . Later programmed messages (Code PcPs of different fate of stars) are formed . For different transformation a specific messages(Code PcP) are expressed Step by step .
It is T mindness that regulates the phenomenon.
These specific Messages (Code PcPs) move from Higher Center to lower centers and from lower center to target B.B.B s of different masses of suns or stars
The B.B.Bs of Different masses of suns having received their specific messages (Code PcPs) , they translate it and they work accordingly . And They transform into different stages from parent nebula or Different masses of suns or stars .
There is Feedback mechanism to higher centers every time before next step is triggered .

Right Depiction - The Fate of stars depends upon not due to its mass rather it is due to triggering of Different Mind expressions

Fig 21.1 Right Depiction --The Fate of stars depends upon its mind or CCP

2.5 Neucleosynthesis on collision of neutron stars

Triggering of phenomenon of nucleosynthesis of Gold (micro and macro level) by atomic transcription and translation or thought expression .

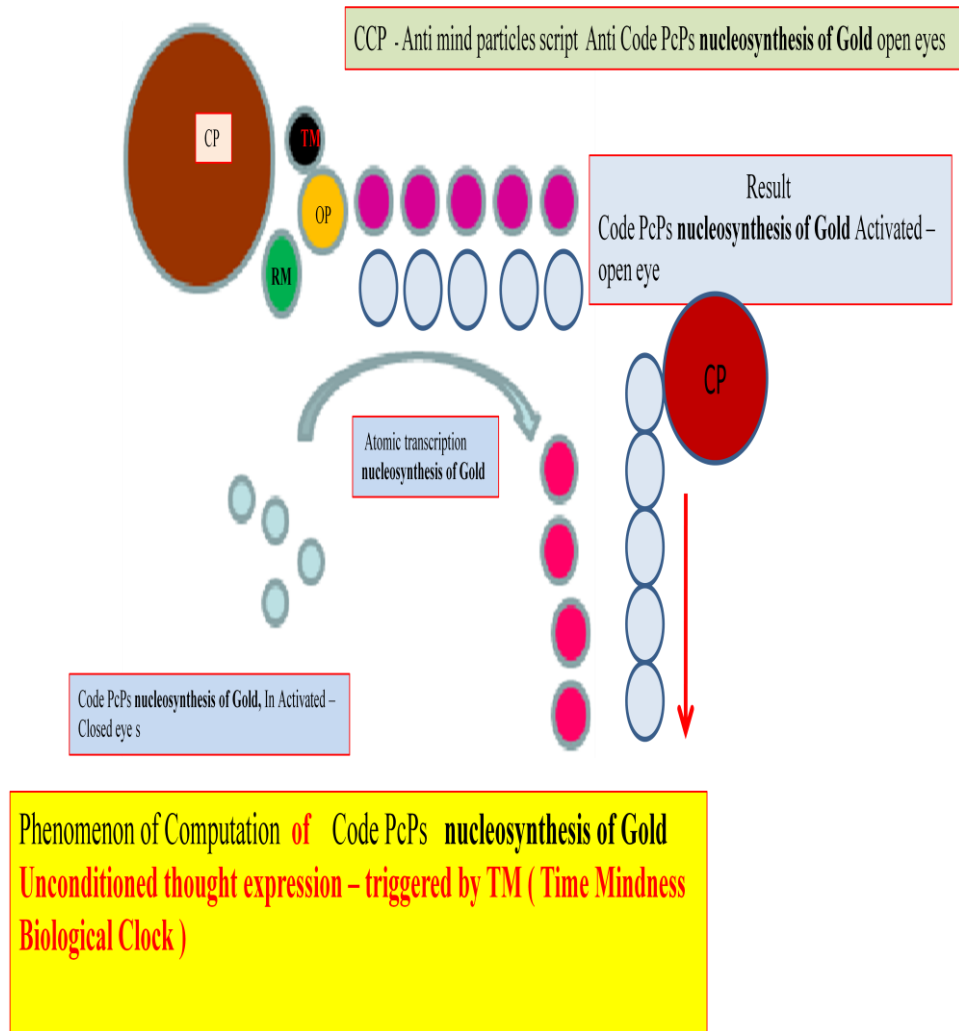

Fig 22 Phenomenon of computation of thought expression of phenomenon of nucleosynthesis of Gold (micro level)

In atomic transcription and translation of **nucleosynthesis of Gold**, following steps take place on Yang B.B.B – B-Bit (higher center in neutron)

1. TM triggers (Biological Clock) the **nucleosynthesis of Gold** (un conditioned) thought expression
2. There is phenomenon of **Memory search** (of the result as it is there in memory after learning) by CP . Having searched the result , there is phenomenon of **memory expression** of the result by CP .
3. CP removes RM (repressor mindness-green) from OM (operating mindness -orange) thus induction of atomic transcription of result is triggered .
4. OM triggers activation of free mind particles (blue -**inactivated code PCPs**) of that thought script (magenta) of “**Code PcPs nucleosynthesis of Gold** ” .
5. Free mind particles (blue -**inactivated Code PcPs nucleosynthesis of Gold**) get attached to anti mind particles script (magenta one) to form messenger thought script of “**Code PcPs nucleosynthesis of Gold**” .
6. Messenger atomic genes (blue) get activated by anti mind particles thought script and further they get detached from anti mind particles thought script to form activated messenger atomic genes (activated code PCPs) (sky blue – open eye) of “**Code PcPs nucleosynthesis of Gold**”
7. CP carries phenomenon of splicing by translating the messenger activated atomic genes (activated code PCPs) and finally there is activated message of “**Code PcPs nucleosynthesis of Gold** ” is formed .
8. CP represses atomic transcription by adding RM (green) to OM (orange) . Thus atomic transcription gets **halt**.

Phenomenon of computation of thought expression of phenomenon of nucleosynthesis of Gold (micro level) separately

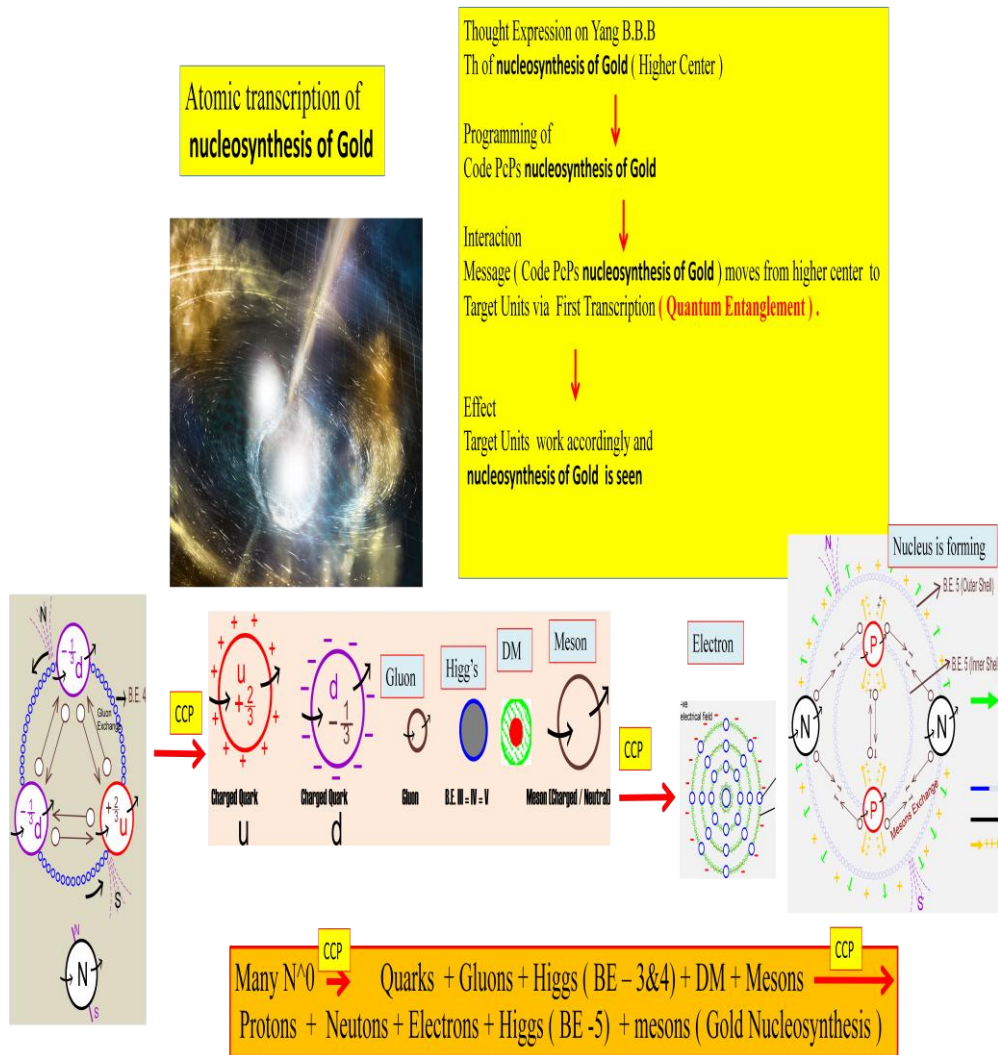

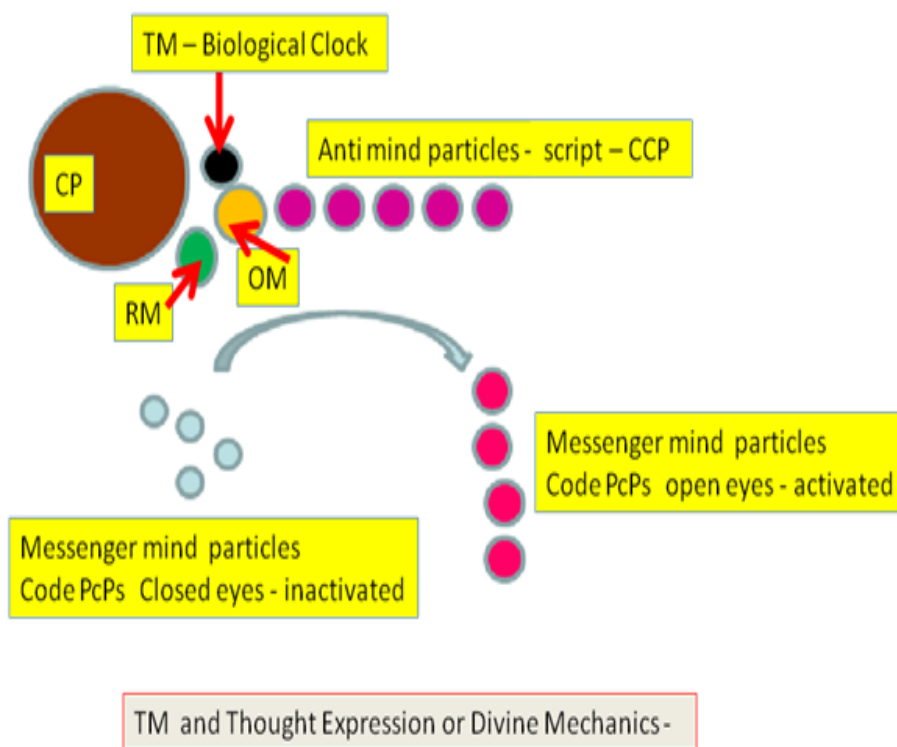

Fig 23 Nucleosynthesis of Gold , (or uranium and platinum) atoms by unconditioned thought expression during neutron stars collision .

During nucleosynthesis of gold , uranium and platinum atoms , neutrons break into their fundamental particles of which neutrons are made up of . Later nucleosynthesis takes place by triggering of new thoughts of nucleosynthesis of gold , uranium and platinum by TM . Informations Code PcPs nucleosynthesis of gold , uranium , and platinum are formed . When these messages spread from higher centers to target units or .B.B.Bs , target B.B.Bs having received the messages (Code PcPs) , they work accordingly and we see the effect of formation of gold , uranium and platinum atoms in neutron stars collision . There are many thoughts that are expressed during creation of new elements step by step . There is feed back to higher center before next thought is triggered . The entire process is being triggered and controlled by TM (unconditioned thought expressions) .

V. Conclusion

This phenomenon of formation of Gold , Uranium and platinum in colliding neutron stars by unconditioned thought expression suggests that nucleosynthesis of atoms is a divine mechanism and these are fed thoughts and feeding was done in precreation era by the Highest center of the universe . What is the need of heavy elements when the life cycle of star is over suggests that it is lawlessness in nucleosynthesis of atoms made by Creator B.B.B . . It probably shows that Almighty B.B.B could make any law by thought to create any thing from any stuff (particles , atoms , molecules etc) any time , whenever He wants .
