**Abstract:** This short paper intends to add a measure of quantitativity to the predictions made in my earlier papers, that are listed below in the acknowledgements, using properties of EM wave, with rather far reaching implications of conclusively toppling Einstein's General Theory of Relativity. It can be considered to be the Nature's Ownfinal nail, in Einstein's General Theory Relativity's,coffin.

**Keywords:** Blue Shift, Em Wave, Einstein, Rgb, Sunlight

### I. Introduction

Exploring the properties of Electromagnetic Waves (EM Waves), using nature' own sunlight, the idea is to point out the flaw in Einstein's General Theory of Relativity.

### II. Description

In the world of Science and Technological Research, it is well known that, everyone prefers quantitativity to qualitativity. According to, Einstein's Theory of General Relativity, Time Speeds up in lower gravitational field and vice versa. If this were true, nature's own sunlight should also obey this. However this is not the case, as this paper will show.

Eigen Vector of Time would stretch inregions where time is slower or dilated. Such a stretched eigen vector will accommodate more number of oscillations of the electromagnetic wave and will blue shift as, compared to where time speeds up or runs faster. So to prove this, an experiment was performed with reflection of sunlight on a standard flooring tile at 0910 Hrs IST.

RGB Values were recorded at 2 locations, vertically separated by 35 ft, using Google's Color Analyzer App on My Mobile Phone . RGB Values were as follows:

Higher Location RGB values : 254, 255, 251 respectively,

Lower Location RGB values : 251,241,214 respectively.

The above results show that, the Sunlight Spectra is Blue Shifted at the Higher Location, as compared to the Spectra at the Lower Location, Which proves that Time is Dilated at the Higher Location, where the Gravity is lower as compared to the Lower Location.

These Results are exactly the opposite of what would have been achieved if, The Theory of General Relativity were true. Hence, nature's own sunlight proves that, Einstein's General Theory of Relativity is, completely wrong.

As Spectrometers are quite pricey, for an independent researcher, I had used my mobile phone to afford or impart some quantitativity to my research.

I would urge readers of this paper to try this experiment with sunlight and even extend it to direct observations with moonlight, and satisfy themselves that, what I am saying is quite correct.

My attempts to obtain quantitative data from, Astronomical Observatories an Universities around the world, failed as none of them, till to date, have ever done any altitude profiling of solar or any other objects.

### III. Conclusion

Time dilates or slows down and not speed up, as you rise above the surface of the Earth, which is exactly opposite, to that postulated by Einstein's General Relativity. It would be worthwhile to quote here, the physicist, Late Richard Feynman ' If your theory, no matter how elegant, does not agree with experiment, it is wrong '. Here the theory in question is Einstein's GR. Though Einstein being a very humble man, had once reportedly remarked: ' I have generated the math for General Relativity, which I myself do not understand and a single experiment can prove it all wrong '. His prediction seems to have been accurate in light of this paper. Here I would urge all the universities and research labs worldwide, not to push the General Relativity bandwagon any longer, lest they continue to do a great disservice to science
